Morality is one of the fundamental structures of any society, enabling complex groups to form, negotiate their internal differences and persist through time. In the first book-length study of Roman popular morality, Dr Morgan argues that we can recover much of the moral thinking of people across the Empire. Her study draws on proverbs, fables, exemplary stories and gnomic quotations, to explore how morality worked as a system for Roman society as a whole and in individual lives. She examines the range of ideas and practices and their relative importance, as well as questions of authority and the relationship with high philosophy and the ethical vocabulary of documents and inscriptions. The Roman Empire incorporated numerous overlapping groups, whose ideas varied according to social status, geography, gender and many other factors. Nevertheless it could and did hold together as an ethical community, which was a significant factor in its socio-political success.

As frustration mounts in some quarters at the perceived inadequacy or speed of international action on climate change, and as the likelihood of significant impacts grows, the focus is increasingly turning to liability for climate change damage. Actual or potential climate change liability implicates a growing range of actors, including governments, industry, businesses, non-governmental organisations, individuals and legal practitioners. Climate Change Liability provides an objective, rigorous and accessible overview of the existing law and the direction it might take in seventeen developed and developing countries and

the European Union. In some jurisdictions, the applicable law is less developed and less the subject of current debate. In others, actions for various kinds of climate change liability have already been brought, including high profile cases such as Massachusetts v. EPA in the United States. Each chapter explores the potential for and barriers to climate change liability in private and public law.

CATS is a thoroughly researched and beautifully illustrated tribute to the animal that was worshiped by the ancient Egyptians as a god and that is still treated as such by many of us in our own homes today. The domestic cat has evolved from a formidable wild creature into the graceful, agile, affectionate, yet independent creature we know and love. Looking into the history of the cat, the development of the different breeds, the criteria used to judge these breeds in shows, as well as feline psychology and communication techniques, CATS is practical as well as informative and beautiful. Enjoy a thoroughly researched and fantastically illustrated portrait of forty different breeds, including Persians and other longhairs and British, American, and Oriental shorthairs. CATS, a title in the popular series Pet Library, is an illustrated, practical guide to animals we love so much that we make them part of the family.

Discover "the stories America needs to hear" (Admiral William H. McRaven, US Navy (Ret.)) with these moving and powerful recollections of war, told by the men and women who lived them. Walk in my Combat Boots is a powerful collection crafted from hundreds of original interviews by James Patterson, the world's #1 bestselling writer, and First Sergeant US Army (Ret.) Matt Eversmann, part of the Ranger unit portrayed in the movie Black Hawk Down. These are the brutally honest stories usually only shared amongst comrades in arms. Here, in the voices of the men and women who've fought overseas from Vietnam to Iraq and Afghanistan, is a rare eye-opening look into what wearing the uniform, fighting in combat, losing friends and coming home is really like. Readers who next thank a military

member for their service will finally have a true understanding of what that thanks is for.

This technical summary prepared by FAO and the World Health Organization (WHO) reports on the two international food safety conferences held in Addis Ababa and Geneva in February and April 2019. It recalls the key actions and strategies presented to address current and future challenges to food safety globally and the steps required to strengthen commitment at the highest political level to scale up food safety in the 2030 Agenda for Sustainable Development. At a pivotal moment focussing international attention on actions needed to bolster food safety, this publication recalls the priorities discussed so that food safety strategies and approaches can be aligned across sectors and borders, reinforcing efforts to reach the Sustainable Development Goals and supporting the UN Decade of Action on Nutrition.

This preliminary genealogy traces the Rider and Ryder families in the United States using the Rider Trace System of Presentation, a unique and highly detailed way of organizing genealogical information. Fremont Rider provides valuable insights into the history and origins of these families, with information on notable ancestors, migrations, and more. A must-read for anyone interested in genealogy or the history of these families. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work is in the "public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Featuring the clearly presented and expertly-refereed contributions of leading researchers in the field of approximation theory, this volume is a collection of the best contributions at the Third International Conference on Applied Mathematics and Approximation Theory, an international conference held at TOBB University of Economics and Technology in Ankara, Turkey, on May 28-31, 2015. The goal of the conference, and this volume, is to bring together key work from researchers in all areas of approximation theory, covering topics such as ODEs, PDEs, difference equations, applied analysis, computational analysis, signal theory, positive operators, statistical approximation, fuzzy approximation, fractional analysis, semigroups, inequalities, special functions and summability. These topics are presented both within their traditional context of

approximation theory, while also focusing on their connections to applied mathematics. As a result, this collection will be an invaluable resource for researchers in applied mathematics, engineering and statistics.??

Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing

food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

Cambridge University Press
This book offers a unified presentation of Fourier theory and corresponding algorithms emerging from new developments in function approximation using Fourier methods. It starts with a detailed discussion of classical Fourier theory to enable readers to grasp the construction and analysis of advanced fast Fourier algorithms introduced in the second part, such as nonequispaced and sparse FFTs in higher dimensions. Lastly, it contains a selection of numerical applications, including recent research results on nonlinear function approximation by exponential sums. The code of most of the presented algorithms is available in the authors' public domain software packages. Students and researchers alike benefit from this unified presentation of Fourier theory and corresponding algorithms.
