Early Kent engines had valves with 9/32 inch diameter stems, while the post-1970 up-rated version had 5/16 inch stems. Although Burton considers bronze valve guides as essential for a race engine, it advises against them for road use. They need greater lubrication so it's necessary to dispense with the valve stem seals, resulting in oil smoke.

The local dealership gave me a parts manual, but they didn't have the service or operators manual on file. Does anybody have one lying around they don't need? Has anybody done an electronic ignition conversion on these old kent engines? I found a petronix distributor but it doesn't appear to have vacuum advance.
