M4 (76mm) Sherman Medium Tank  
1943 – 65 Lorenz Books  
Steven J Zaloga offers a fascinating comparison between the two most important tanks involved in the crucial fighting of 1944, the American Sherman and the German Panther. Placing the reader in the heart of this battle between quality and quantity Zaloga uses a compelling account of the ferocious fighting during the Battle of the Bulge to explain the successes and failures of each tank, highlighting the fact that a tank can only be as good as its crew, weighing up the impact of low morale, high cost and mediocre crew training on the Panther's superiority. With full-colour battlescenes, technical drawings, photographs, digital gunsight views, extracts

from crew training manuals and real combat reports, this book brings the titanic battles between the Panther and Sherman to life.

The M4 Sherman can be said to be the tank that won World War II. With almost fifty thousand built during the war, it was America's primary armored fighting vehicle during the war. Thousands of these found their way into the inventories of the British Army and Soviet Red Army as well as other allies. This manual covers the development of the Sherman, the vast array of variants, and the use of the hull and chassis for other purposes. Also covered is production, anatomy, paintwork, and markings. Information on the M4 in action takes the reader from combat against

---

Rommel's Afrika Korps to Italy, the invasion at Normandy, and the race across France. And it wouldn't be a Haynes manual without practical information about owning, restoring, and maintaining a Sherman tank. Whether you are an armchair General Patton or a serious collector, tips on buying a tank, special tools, handling heavy components, and recommended fluids and lubricants will prove invaluable.

### **D-Day Tank Warfare** Bloomsbury Publishing

The advent of combined arms operations in World War II created the need for specialized armored vehicles. In the case of amphibious attacks, the issue arose of how best to land tanks on a beach. Although a variety of specialized landing craft were developed, the Dieppe raid in

---

1942 encouraged the development of tanks that could be deployed from further off-shore to limit the vulnerability of the LCT craft. The deep-wading equipment that they developed was first used during Operation Husky on Sicily in July 1943, and subsequently for Operations Avalanche (Salerno, September 1943), Shingle (Anzio, January 1944) and Overlord (Normandy, June 1944). The US-manufactured DD tanks were used during Overlord by both US and British forces, and again in 1945 during the Rhine crossings. Initially, developments in the Pacific Theater were separate from those in Europe. The Marines learned from the Tarawa landings in 1943 that unprepared tanks could not be safely landed even in shallow water. DD tanks were never seriously considered for the Pacific, so other solutions were sought. A detailed study of specialized US amphibious tanks, this is a title that will appeal to those interested in both Pacific and European Theaters, modellers and collectors.

The Sherman Crab Flail tank was the powerful culmination of a series of mine-clearing flail tanks developed during World War II. Here, David Fletcher recounts how the Sherman Crabs were among the first tanks ashore on D-Day and as the war progressed they were in constant demand both for formal attacks and more incidental

fighting in tank duels, and this book includes dramatic accounts of its use by the famous 79th Armoured Division and the US Army. The author explores the beginnings of the design in the Matilda Scorpion and Baron flails, developed for the Valentine and M3 Grant tanks, through to the Sherman, and particularly the Crab version. interesting tanks in the Funnies series is a delight for any modeller or tank enthusiast.

**The Illustrated Guide to Tanks of the World** Casemate Publishers

The M4 Sherman tank was the mainstay of the Western allies between 1942 and 1945. Fast and modern it was a big success and was transported as far afield as Russia and North Africa. The American Chief of Staff claimed in November 1943 it was 'hailed widely as the best tank on the battlefield today...'. However, by the Normandy invasion of June 1944 this was not the case: the new German heavy tanks such as the Panther and Tiger were completely outclassing the Sherman. This title covers the M4 version armed

with the 76 mm gun, examining developments such as the HVSS suspension, using much new archive material.

*Panther vs Sherman* Bloomsbury Publishing

Stuart, Sherman, Lee, and Grant tanks dominated the US Army and Marine Corps armored warfare effort versus Nazi Germany and Tojo's Japan. This book details the full range of these vehicles, giving technical specifications and development features as well as describing how they were manned and fought in battle. The equipping of the United States military with the weapons it needed to prevail during World War II was an unparalleled example of

---

America's industrial might at the time. Among the many weapons produced by America's workers, tanks rate as an important example with 88,140 built between 1939 and 1945. This was almost twice what Germany and Great Britain built combined during the same period. These tanks not only equipped America's ground forces but saw service with many allied armies. In addition to the 18,620 tank-based variants, such as armored engineering vehicles, self-propelled artillery, armored recovery vehicles, and tank destroyers, American factories went on to design and build thousands of wheeled armored cars for reconnaissance purposes and armored half-tracks to transport the infantry into battle behind the tanks. Like the tanks, American armored half-tracks were modified to serve a wide variety of jobs including self-propelled artillery, tank destroyers and anti-aircraft vehicles. So useful were these vehicles that they would remain in service with foreign armies for decades after World War II. To complement its inventory of tanks and armored fighting vehicles the American military industrial complex also designed and built over 18,000 amphibian

---

tractors. Appearing in both unarmored and armored variants they went into combat with a wide variety of armaments. Referred to as the Landing Vehicle Tracked (LVT) they would serve not only with the U.S. Marine Corps who often called them "Amtracs" but the US Army who referred to them as the "Water Buffalo." They would allow the American military to take the fight to the far flung Japanese Empire wherever it had established itself in the vast reaches of the Pacific Area of Operations. These same vehicles would also see service in the ETO with the US Army and allied

forces when it came time to cross various water obstacles used by the German military as defensive barriers.
