To predict our future, we must look to the extremes. So argues the economist Richard Davies, who takes readers to the margins of the modern economy and beyond. These extreme economies illustrate the forces that test human resilience, drive societies to failure, and promise to shape our collective future. Reviving a

foundational idea from the medical sciences, Extreme Economies turns the logic of modern economics on its head by arguing that these outlier societies can teach us more about our own than we might imagine. By adapting to circumstances unimaginable to most of us, the people in these societies are pioneering the economic infrastructure of the future.

Drew Struzan is the best-kept secret in Hollywood. Over the last thirty years, he's created many of Hollywood's most memorable posters. His art touched generations of filmgoers with unforgettable images for The Star Wars Trilogy, Raiders of the Lost Ark, Indiana Jones and the Temple of Doom, The Phantom Menace, Bladerunner, First Blood, The Thing, Back to the Future I - III, Harry Potter and the Sorcerers Stone, and hundreds more. Finally, these posters, in addition to paintings from Drew's private collection, several limited edition works, book and album covers and more have been collected into one stunning full color volume, Drew Struzan: Oeuvre. Authors Jessie and Amy Horsting examine the unique forces shaping Struzan's career, his rise as an illustrator, and the perseverance required to succeed and thrive in a notoriously fickle industry. Featuring a foreword by George Lucas, the book also focuses on the history of some ground-breaking posters, relates a few celebrity encounters, and offers commentary from Harrison Ford, Frank Darabont, Alice Cooper, Robert Zemekis, Jim Henson, and many others who have had close encounters with this giant talent.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and o (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
