This manual, published by the Illinois Association of School Boards, was designed to be used as a teaching tool and reference source for overseeing effective school maintenance. Section 1 describes the basics of good school maintenance, including managing the program, using computers, controlling energy costs, ensuring safe practices,

---

designing buildings for efficient maintenance, and being informed about environmental issues. Section 2 details guidelines for operating cleaning and general building services, such as custodial operations, area cleaning programs, and equipment and supplies. A custodian's glossary is included. The third section provides guidelines for building maintenance, specifically, caring for the exterior and roof. Procedures for maintaining school grounds are detailed in the fourth section. The fifth section describes the maintenance of mechanical equipment, including heating and air conditioning systems, sanitary systems and fixtures, sewage treatment plants, and electrical

systems. A management tools appendix contains a list of environmental resources; sections on cleaning and general building services, grounds maintenance, and mechanical equipment; and annual inspection checklists. (LMI)

This book is the result of a long-term co-  
operative research and professional  
development programme between the Instituto  
de Investigaciones Electricas (IIE), Mexico, and  
the University of Salford, UK. It provides the  
design basis for the fabrication of small and  
large scale commercial absorption heat pump  
systems, and includes a comprehensive  
treatment of the economics of heat pump

systems. It charts the development of heat pump  
technology from theoretical principles to the  
operation of practical systems for the  
purification of water, both for human  
consumption and a wide variety of industrial  
purposes. In addition to the increasing demand  
for potable water there is a rapidly increasing  
demand for clean water in industries ranging  
from foodstuffs and pharmaceuticals to  
electronics. This book will be essential reading  
for industrial engineers and others concerned  
with the cost-effective, environmentally friendly  
production of clean water.
