Nationalists from Quebec and Catholic militants from Mexico once shared a common cause, one that influenced international relations between their two countries. At a time when the Revolution and its aftermath in Mexico and world wars marginalized voices of political dissent in Canada, Catholics in both nations saw their cultural struggles as

interconnected and worked to build transnational alliances as meaningful discourses of cultural identity. In *Connected Struggles*, Maurice Demers considers how and why groups from Mexico and Quebec actively sought to establish close cultural and political links. Drawing on extensive research in government, religious, and university archives in Mexico and Canada, Demers delves into the actors, their rationales, and the processes and meanings of such alliances. He proposes a reinterpretation of North-South collaboration in the Americas by analysing how the bonds created by Quebec's and Mexico's civil societies and religious communities influenced diplomatic relations,

---

showing not only the Catholic origins of this solidarity, but its conservative - even reactionary - roots. Demers explains how the foreign ministries in Canada and Mexico both used and denounced these linkages, depending on the political gains to be made. Documenting the emergence of solidarity between French Canadians and Mexicans, *Connected Struggles* contributes to the understanding of the influence of civil societies in the history of international relations.

It has been said that the future of Life is about Artificial Intelligence (AI) and that as AI advances a point will be reached, the Singularity, when humans will no longer have a clue as to what is going on nor why. Essentially as a species, humans will at this point have been marginalized by a global, singular intelligence, whose capabilities far outstrip human intelligence. On the contrary, this book will make the case that the future of Life is enabled by the pre-existent complexity that exists in every iota of it and that there have already been a series of light-based epiphanies by virtue of which

---

Life in its continuing complexities has emerged as partial-singularities, and further, will culminate in a Second Singularity as more of our species consciously opens to the fullness of Light. The power and capabilities of the Second Singularity will far outstrip any AI-based singularity. This pre-existent complexity derives from the fact that Light exists in multiple states simultaneously. Hence, there is a fundamental and single light-based edifice that informs our universe, and it is by virtue of this light-based edifice that all matter, all life, all mind, and all emergences beyond the level of mind will surface. The future of life, hence, cannot be due to AI. At best, AI, can create a process by which many tasks that usually require utilization of the fundamental light-derived capacity of intelligence in order to be completed, can be completed by an exhaustively repetitive running of algorithms driven by massive computing power, hence giving the illusion of intelligence. Projected forward, the exhaustively repetitive running of algorithms driven by massive

computing power, endow a practically ubiquitous digitally-enabled strata to control many tasks, and this may create the phenomenon of a “singularity” — in which humankind effectively cannot even fathom how things are happening anymore and is seemingly outpaced and outthought at every step in every direction by an ‘intelligence’ that appears to be all-knowing, all-present, and all-powerful. But this kind of singularity is fundamentally separated from the light-based edifice behind all things, and from which all things rise. It is hence not a true singularity in the sense of a finite function assuming infinite value, but is fundamentally limited in its scope by virtue of its disconnection from the founts of Life. This does not preclude an AI-based singularity from having massive practical power that can have an enormous destructive or constructive effect on humankind and material life. What it does mean though is that there is another singularity, a human-founded singularity, the Second Singularity, which can exceed the limits

---

of any AI-based singularity due to its fundamental union with the light-based edifice that is behind and informs all of Life. The possible human-founded singularity, it will be discovered, is one in a long series of naturally occurring though partial-singularities that derive their existence from a fundamental union with the light-based edifice behind all things. Such partial-singularities are characterized by having all the power of the light-edifice behind them, though the emergences in such partial-singularities are not necessarily aware of their oneness with the light-based edifice. In the Second Singularity humans become aware of such oneness, becoming conscious projections animated by a single intelligence, love, and power of which they are a part. It is hence no more the human-level capacity that drives such humans, but the infinite capacities of the one light-based edifice that drives. This book focuses on the mathematics of emergence of these naturally occurring partial-singularities, leading up to the possible human-founded

singularity that will endow humankind with the potential for extraordinary capacities.

After the Great Complacence Biblical Studies Press Plato's dialogue The Statesman has often been found structurally puzzling by commentators because of its apparent diffuseness and disjointed transitions. In this book David White interprets the dialogue in ways which account for this

problematic structure, and which also connect the primary themes of the dialogue with two subsequent dialogues The Philebus and The Laws. The central interpretive focus of the book is the extended myth, sometimes called the 'myth of the reversed cosmos'. As a result of this interpretative approach, White argues that The Statesman can be recognized (a) as both internally coherent and also profound in implication-the myth is crucial in both regards - and (b) as integrally related to the concerns of Plato's later dialogues.

Handbook of Research on Reading Comprehension, Second Edition Routledge

This book examines the relationship between Plato's views on psychology and his political philosophy, focusing on his reflections on the spirited part of the tripartite soul, or thumos, and spirited motivation over the course of his career. Spirit is the distinctively social or political part of the human soul for Plato, in the sense that it is the source of the desires, emotions, and sensitivities that make it possible for people to form relationships with one another, interact politically, and cooperate together in and protect their

communities. Such emotions prominently include not only the aggressive or competitive qualities for which thumos is well known, but also the feelings of attachment, love, friendship, and civic fellowship that bind families and communities together and make cities possible in the first place. Moreover, as spirit is the political part of the soul in this sense, two social and political challenges that occupy Plato throughout his works--namely, how to educate citizens properly in virtue and how to maintain unity and stability in political communities--cannot be addressed and resolved, on his view, without proper attention to the spirited aspects of human psychology.

The bestselling 30-Second... series takes a revolutionary approach to learning about those subjects you feel you should really understand. Each title selects a popular topic and dissects it into the 50 most significant ideas at its heart. Every idea, no matter how complex, is explained in 300 words and one image, all digestible in just 30 seconds.

Live operatic performance was once part of popular culture yet in modern times it has become caricatured as exclusive, overwhelming and, often, very very long. 30-Second Opera raises the curtain so that anyone can enjoy opera, classical or contemporary, without the elitism. Compiled by opera buffs, not the bourgeoisie, it serves up all you need to enjoy the spectacle, the music, and above all the voices — from Farinelli to femme fatale.

Goldschmidt looks at the relationship between Rome's two great epic poems, Ennius' Annales and Virgil's Aeneid. Focusing on the intersections between intertextuality and the appropriations of cultural memory, Goldschmidt considers how Virgil's poem appropriates and re-writes the myths and memories which Ennius had enshrined in Roman epic.

The papers, arranged in historical order, fall into six groups: ancient philosophy (the Pythagoreans, Plato, and Aristotle); the seventeenth-century rationalists (Descartes, Leibniz and Spinoza); the empiricists (Locke, Berkeley, and Hume); Kant; the nineteenth century (Hegel, Schopenhauer, and Mill); and, in conclusion, an essay on Wittgenstein's Tractatus and two broad, retrospective papers entitled "Old Analyses of the Physical World and new Philosophies of Language" and "Moral Crisis and the History of Ethics."

One of the most comprehensive books to focus on the relationship between cinema and the other arts, this volume explores types and stylistic devices of intermediality through a wide range of case studies. It addresses major theoretical issues and highlights the relevance of intermedial relations in film history, mapping the

theoretical field by outlining its main concepts and the research avenues pursued in the study of cinematic intermediality, including the most recent approaches and methodologies. It also presents some major templates of intermediality through various examples from world cinema, including closer looks at films by auteurs like Alfred Hitchcock, Michelangelo Antonioni, Jean-Luc Godard, and Agnès Varda.

Supplemented by three new chapters dealing with phenomena which came into view since its first publication, the revised and enlarged edition of this ground-breaking volume will serve as a useful handbook to clarify key ideas and to offer insightful analyses.

The two volumes of the second edition of the International Handbook of Educational Change comprise a totally new, and updated collection of the most critical and cutting-edge ideas in educational change. Written by the most influential thinkers in the field, these volumes cover educational change at both the theoretical and practical levels. The updated handbook remains connected to the classical concerns of the field, such as educational innovation, reform, and change management, and also offers new insights into educational change that have been brought about by social change and shifting contexts of educational reform. Like the first best selling Handbook, this one will also undoubtedly become an essential resource for people involved in all spheres of education, from classroom teachers, teacher leaders and administrators to educational researchers, curriculum developers, and university professors. No other work provides such a wide-

ranging and comprehensive examination of the field of educational change.
