Hornet Plus Three follows the evolution of the DOD, Navy and NASA's efforts to take up President John F. Kennedy's challenge to [land] a man on the Moon and [return] him safely to Earth. In order to recover spacecraft from the vast ocean, the Navy and DoD had to create very elaborate plans and backups. This book traces those plans, from Mercury Freedom 7 to Apollo 12. Each aspect is explored, from the many types of aircraft employed, the different ships and their crews, and the diving specialists whose mission was to protect the astronauts.

This book deals with supply-side their scheme. The head of the economics and the needed reorientation it would bring to West German policy. The change, recommended after searching analysis, would add up to an overall strategy for freeing markets, for removing government-imposed distortions, and for using free-market approaches to correct distortions imposed by pressure groups. The strategy would pierce Germany's state-supported encrustations and corporatism. It would equip the country to follow the lead of the United States and Great Britain in starting to escape from the tangle in which taxes, regulations, and unemployment have grown in step. The impending completion of the European internal market in 1992 adds urgency to this task.

In the early 1990s, the First National Bank of Keystone in West Virginia began buying and securitizing subprime mortgages from all over the country, and quickly grew from a tiny bank with just \$100 million in assets to over \$1.1 billion. For three years, it was listed as the most profitable large community bank in the country. It was all a fraud. All of the securitization deals the bank entered into lost money. To hide that fact, bank insiders started cooking the books, and concealing that they were also embezzling millions of dollars from the bank. This was all hidden from the bank's attorneys and auditors, federal bank examiners, and even the board of directors of the bank. To keep the examiners at bay, the bank insiders did everything possible to avoid giving them access to documents they were entitled to see, documents they knew would sink the bank even went so far as to bury four large truckloads of documents in a ditch on her ranch. Robert S. Pasley explores the failure of the First National Bank of Keystone, the intrigue involved, and the lessons that could have been learned—and still can be learned—about how banks operate, how federal banking regulators supervise financial institutions, how agencies interact with one another, and how such failures can be avoided in the future.

Geoffrey Stone's *Perilous Times* incisively investigates how the First Amendment and other civil liberties have been compromised in America during wartime. Stone delineates the consistent suppression of free speech in six historical periods from the Sedition Act of 1798 to the Vietnam War, and ends with a coda that examines the state of civil liberties in the Bush era. Full of fresh legal and historical insight, *Perilous Times* magisterially presents a dramatic cast of characters who influenced the course of history over a two-hundred-year period: from the presidents—Adams, Lincoln, Wilson, Roosevelt, and Nixon—to the Supreme Court justices—Taney, Holmes, Brandeis, Black, and Warren—to the resisters—Clement Vallandigham, Emma Goldman, Fred Korematsu, and David Dellinger. Filled with dozens of rare photographs, posters, and historical illustrations, *Perilous Times* is resonant in its call for a new approach in our response to grave crises.

Sea otters once ruled the Pacific Ocean, but the fur trade of the eighteenth and nineteenth centuries brought this predator to near extinction. Today they're slowly coming back from the brink, and scientists are learning more about their pivotal role as one of nature's keystone species. This book looks at the history, biology, behavior and uncertain future of sea otters. Author and photojournalist Isabelle Groc takes us into the field: watching sea otter rafts off the British Columbia coast from a kayak, exploring what makes their fur coats so special, understanding how their voracious appetites are helping kelp forests thrive and, ultimately, learning how sea otters are leaving their mark (or paws) on every part of the ecosystem. They might be one of the most adorable creatures in the ocean, but kids will discover how their survival is key to a rich, complex and connected ecosystem.

During the nineteenth century, Yucatán moved effectively from its colonial past into modernity, transforming from a cattle-ranching and subsistence-farming economy to a booming export-oriented agricultural economy. Yucatán and its economy grew in response to increasing demand from the United States for henequen, the local cordage fiber. This henequen boom has often been seen as another regional and historical example of overdependence on foreign markets and extortionary local elites. In *The Making of a Market*, Juliette Levy argues instead that local social and economic dynamics are the root of the region's development. She shows how credit markets contributed to the boom before banks (and bank crises) existed and how people borrowed before the creation of institutions designed specifically to lend. As the intermediaries in this lending process, notaries became unwitting catalysts of Yucatán's capitalist transformation. By focusing attention on the notaries' role in structuring the mortgage market rather than on formal institutions such as banks, this study challenges the easy compartmentalization of local and global relationships and of economic and social relationships.
