"Mr. Pishioneri weaves a great story that brings you through the times when love of family and love of country meant the world to the people of America." Hanging beneath a B-24 Liberator in flight, in 40 to 60 degree weather, bringing his

own oxygen and heat with him in this hostile environment; a moving target for enemy fighters, gives one a unique perspective from which to ponder who and what it's all about. The author, a veteran of 35 bombing missions over occupied Europe during World War II, recalls his experiences illuminated by the insight of a Bachelor of Science in American History and 37 1/2 years of teaching Social Studies. A veteran storyteller and talented artist, he weaves his story by chronicling the historical events and personal experiences of his service life between the actual letters he wrote home that were preserved for him by his mother. In *Me, Mom and World War II*, the reader steps back in time to experience life as the middle child of a large Italian-American family growing up in a small steel town in Western Pennsylvania. The loss of their father, and living through The Great Depression followed by "the emergency" brought on by the bombing of Pearl Harbor forged within them a strength and courage that held them together.

This list is set out in two sections: The Royal Navy with the Navies of the Empire and the Royal Marines; and The Royal Naval Air Service, Royal Flying Corps and Royal Air Force. As with the other volumes in the series date and place of death are given with place of burial or commemoration. This volume breaks new ground by recording the deaths and burial sites of other ranks, and extending the date of research to 1921. The title is not exactly right since it makes no mention of Warrant Officers who are included in the lists.

Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat

cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.
