Diesel Engines CarTech Inc The Ombudsman investigated three cases in which local statutory supervision of midwives failed, all of which occurred at Morecambe Bay NHS Foundation Trust. The cases clearly illuminate a potential muddling of the supervisory and regulatory role of supervisors of midwives. The current arrangements do not always allow information about poor care to be escalated effectively into hospital clinical governance or the regulatory system. This means the current system operates in a way that risks failure to learn from mistakes, which cannot be in the interests of the safety of mothers and babies and must change. Working with the Nursing and Midwifery Council (NMC), the Professional Standards Authority for Health and Social Care, NHS England and the Department of Health, the Ombudsman has identified two key principles that will form the basis of proposals to change the system of midwifery regulation: that midwifery supervision and regulation should be separated; that the NMC should be in direct control of regulatory activity. The Department of Health should

convey these recommendations to its counterparts in Northern Ireland, Scotland and Wales and develop proposals to put these principles into effect.

The demise of state Socialisms caused radical social, cultural and economic changes in Eastern Europe. Since then, young people have been confronted with fundamental disruptions and transformations to their daily environment, while an unsettling, globalized world substantially reshapes local belongings and conventional values. In times of multiple instabilities and uncertainties, this volume argues, young people prefer to try to adjust to given circumstances than to adopt the behaviour of potential rebellious, adolescent role models, dissident counter-cultures or artistic breakings of taboo. Eastern European Youth Cultures in a Global

Context takes this situation as a starting point for an examination of generational change, cultural belongings, political activism and everyday practices of young people in different Eastern European countries from an interdisciplinary perspective. It argues that the conditions of global change not only call for a differentiated evaluation of youth cultures, but also for a revision of our understanding of 'youth' itself – in Eastern Europe and beyond.

A deep study of the uneasy heart by one of the masters of the psychological novel, *Journey into the Past*, published here for the first time in America, is a novella that was found among Zweig ' s papers after his death.

Investigating the strange ways in which love, in spite of everything—time, war, betrayal—can last, Zweig tells the story of Ludwig, an ambitious young man from a modest background who falls in love with the wife of his rich employer. His love is returned, and the couple vow to live together, but then Ludwig is dispatched on business to Mexico, and while he is there the First World War

breaks out. With travel and even communication across the Atlantic shut down, Ludwig makes a new life in the New World. Years later, however, he returns to Germany to find his beloved a widow and their mutual attraction as strong as ever. But is it possible for love to survive precisely as the impossible?

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and

the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO₂ emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons.

in the most prevalent imaging modality (x-ray computed tomography (CT)) in its latest incarnation: Spectral, Dual-Energy, and Photon Counting CT.

Disadvantages of the conventional single-energy technique used by CT technology are that different materials cannot be distinguished and that the noise is larger. To address these problems, a novel spectral CT concept has been proposed.

Spectral Dual-Energy CT (DE-CT) acquires two sets of spectral data, and Spectral Photon Counting CT (PC-CT) detects energy of x-ray photons to reveal additional material information of objects by using novel energy-sensitive, photon-counting detectors. The K-edge imaging may be a gateway for functional or molecular CT. The book covers detectors and electronics, image reconstruction methods, image quality assessments, a simulation tool, nanoparticle contrast agents, and clinical applications for spectral CT.

Smart homes are intelligent environments that interact dynamically and respond readily in an adaptive manner to the needs of the occupants and changes in the ambient conditions. The realization of systems that support the smart homes concept requires integration of technologies from different fields. Among the challenges that the designers face is to make all the components of the system interact in a seamless, reliable and secure manner. Another major challenge is to design the smart home in a way that takes into account the way humans live and interact. This later aspect requires input from the humanities and social sciences fields. The need for input from diverse fields of knowledge reflects the multidisciplinary nature of the research and development effort required to realize smart homes that are

public. The applications that can be supported by a smart home are very wide and their degree of sophistication depends on the underlying technology used. Some of the application areas include monitoring and control of appliances, security, telemedicine, entertainment, location based services, care for children and the elderly... etc. This book consists of eleven chapters that cover various aspects of smart home systems. This book explores visual object recognition and introduces a collaborative model, codified as the "Perceptual Expertise Network" (PEN). It focuses on delineating the principles of high-level visual learning that can account for how different object categories are processed and associated with spatially localized activity in the primate brain. It address questions such as how expertise develops, whether there are different kinds of experts, whether some disorders such as autism or prosopagnosia can be understood as a lack or loss of expertise, and how conceptual and perceptual information interact when experts recognize and categorize objects. The research and results that have been generated by these questions are presented here, along with other questions,

background information, and extant issues that have emerged from recent studies.
