The notions of other peoples, cultures, and natural conditions have always been determined by the epistemology of imagination and fantasy, providing much freedom and creativity, and yet have also created much fear, anxiety, and horror. In this regard, the pre-modern world demonstrates striking parallels with our own insofar as the projections of alterity might be different by degrees, but they are fundamentally the same by content. Dreams, illusions, projections, concepts, hopes, utopias/dystopias, desires, and emotional attachments are as specific and impactful as the physical environment. This volume thus sheds important light on the various lenses used by people in the Middle Ages and the early modern age as to how they came to terms with their perceptions, images, and notions. Previous scholarship focused heavily on the history of mentality and history of emotions, whereas here the history of pre-modern imagination, and fantasy assumes center position. Imaginary things are taken seriously because medieval and early modern writers and artists clearly reveal their great significance in their works and their daily lives. This approach facilitates a new deep-structure analysis of pre-modern culture.

When you first hear the term Information Assurance you tend to conjure up an image of a balanced set of reasonable measures that have been taken to protect the information after an assessment has been made of risks that are posed to it. In truth this is the Holy Grail that all organisations that value their information should strive to achieve, but which few even understand. Information Assurance is a term that has recently come into common use. When talking with old timers in IT (or at least those that are over 35 years old), you will hear them talking about information security, a term that has survived since the birth of the computer. In the more recent past, the term Information Warfare was coined to describe the measures that need to be taken to defend and attack information. This term, however, has military connotations - after all, warfare is normally their domain. Shortly after the term came into regular use, it was applied to a variety of situations encapsulated by Winn Schwartau as the three classes of Information Warfare: Class 1- Personal Information Warfare. Class 2 - Corporate Information Warfare. Class 3 - Global Information Warfare. Political sensitivities lead to "warfare" being replaced by "operations", a much more "politically correct" word. Unfortunately, "operations" also has an offensive connotation and is still the terminology of the military and governments.
