The victory not only secured Britain's trans-Atlantic lifeline to the United States, but also enabled the vast build-up in military forces in Britain necessary to launch D-Day in 1944. The Allied battle to defeat the U-boat menace was a combined effort by the naval and air forces of several Allied nations, and this is the story of one part during the decisive mid-war period. Nos 10 and 461 Squadrons of the Royal Australian Air Force flew Sunderland flying boats from bases in Wales and Devon as part of RAF Coastal Command; these two squadrons flew long-range daylight missions over the eastern Atlantic, patrolling Britain's southwest approaches. They hunted and killed U-boats transiting between their mid-Atlantic hunting grounds and their bases in Bordeaux and fought furious air battles over the Bay of Biscay against Luftwaffe Ju 88 long-range fighters tasked specifically with shooting them down. These two Australian squadrons established a combat record.

The story of the British-made bombs, Upkeep and Highball, successfully dropped on Nazi dams "has never been told in such depth before" (Daily Mail, UK). The night of May 16, 1943: Nineteen specially adapted Lancaster bombers take off from an RAF airfield in Lincolnshire, England, each with a huge nine-thousand-pound cylindrical bomb strapped underneath it. Their mission: to destroy three hydroelectric dams that power the Third Reich's war machine. It was a suicide mission from the outset. First the men had to fly extremely low, at night, and in tight formation over miles of enemy-occupied territory. Then they had to drop with pinpoint precision a complicated spinning cylindrical bomb that had never before been used operationally. More than that, the entire operation had to be put together in less than ten weeks in order to hit the dams when water levels were still high enough for the bombs to be effective. The visionary aviation engineer Barnes Wallis hadn't even drawn up plans for his concept when the bouncing bomb was green-lighted. What followed was an incredible race against time that, despite numerous setbacks, became one of the most successful and significant bombing raids of all time. "Holland has delved into the new trove" of declassified documents "to shed light on this weapons program, the politics of its development and the eventual mission" (The Wall Street Journal). "An impeccably researched work in the style of a fast-paced techno-thriller." -Publishers Weekly "Extremely detailed but never dull . . . Holland offers a definitive, nuts-and-bolts history." -Kirkus Reviews "A well-written study of engineering and invention operating under great pressure. . . . For all World War II history buffs." -Library Journal, starred review

Put simply, Think Straight is an owner's  
manual for the human brain. Drawing from the  
vast history of scientific and cognitive  
research, this book is a tour de force through  
the science and philosophy of the human mind,  
and what it means to think as a rational human  
being in the 21st century. Our world is awash  
in mis- and disinformation, baseless  
conspiracy theories, New Age ideology, anti-  
science propaganda, and all manner of magical  
thinking. Pseudo-experts fill the airwaves  
with false and bogus claims, news media twist  
and spin information to suit their ends,  
celebrities and corporations push evidence-  
free beliefs on their followers, and  
politicians continue to mislead the masses  
with false promises and bad thinking. In  
careful detail, author Jon Guy investigates  
the art of thinking critically, offering  
readers the ability to empower themselves and  
our society at large. In order to think  
critically, we must also learn what it means  
to know, what knowledge is, how to  
investigate, how to question, and how  
everything from computer algorithms written by  
geniuses to psychological traits embedded in  
us from our evolutionary origins conspire to  
construct a model of reality that we have much  
reason to doubt. The human mind is not only  
the most powerful and complex structure ever  
discovered, it is also riddled with a host of  
flaws, shortcomings, errors, and limitations,  
most of which none of us are ever made aware  
of. Critical thinking is the ability to both  
capitalize on the strengths and power of human  
cognition, as well as understand and combat  
the error-prone nature of our brains. Think  
Straight encourages us to accept that not  
everything we think is true and explores how  
we can compensate for the many errors of our  
minds. Backed by the best available research  
and data, and written in clear and decisive  
language, Think Straight provides readers with  
the proper guidance and tools to improve your  
thinking, inform your decisions, avoid fraud  
and deceit, and make the world a better place  
to live and prosper.
