Based on current thinking and research from the fields of management and psychology, *Leadership in the Bible* provides guidance about the most effective ways of responding to forty challenging situations you encounter every day. This guidance is grounded in the wisdom of three key figures in Hebrew scripture Abraham, Joseph, and Moses. It explores how they coped with similar challenges, and it provides recommendations about how to respond to these situations at work or at home. Each chapter ends with an essential lesson, a lesson that was true thousands of years ago and remains so today. Its refreshing to find new approaches [to leadership] that are useful in both our personal and

professional lives . . . A worthwhile read for anyone looking to strengthen their skills (Susan Cohn Rockefeller, HuffPost Books). Arnow and Ohana have put the Hebrew Bible back in business. Through their insightful and creative readings, they distill a spiritual business model for the 21st century (Rabbi Lawrence Kushner, Emanu-El scholar at Congregation Emanu-El of San Francisco, author of a score of books on spirituality, Judaism, and kabbalah).

This book is addressed to students and professionals, and it is aimed to cover as much as possible the broader region of topographic mapping as it has evolved into a modern field called geospatial information science and technology. More emphasis is placed on using scientific methods and tools materialized in algorithms and software to produce practical results. For this reason, beyond the written material, there are also many educational and professional software programs written by the first author to help comprehend the individual methodologies developed. The Target of this book is to provide the people who work in fields of

applications of topographic mapping (environment, geology, geography, cartography, engineering, geotechnical, agriculture, forestry, geointelligence, etc.) a source of knowledge for the broader region so that to help them in facing relevant problems as well as in preparing contracts and specifications for such type of work assigned to professionals and evaluating such contracting results. It also aims to be a reference for theory and practice for professionals in Topographic Mapping. This book applies a didactics method where, with a relatively small effort, someone can digest a large volume of simple or complicated knowledge material at a desirable scientific depth within a relatively short time interval. The objective that educated people must be "smarter than the machine" and not treat the machine as a "black box" being "button pushers" has been achieved through the first author's experience in the USA and Greece, with relative success by adopting this didactics technique. There are 14 chapters, including Reference systems and Projections, Topographic instruments and Geometry of coordinates, Conventional construction of a topographic map, Design and reproduction of a thematic map, Digital Topographic mapping - GIS, Digital Terrain Models (DTM / DEM), GPS/GNSS, methods of Photogrammetry, Remote Sensing, new technologies LIDAR, IFSAR, Augmented reality, Mapping with UAS/UAV/Drones, the method of Least Squares adjustment, and Description of educational software accompanying the text.

Student affairs professionals are increasingly being called upon to become scholar practitioners, to reflect on and share their experiences to further the knowledge of the field, and to disseminate practices to promote student learning and development. This book offers practical guidance to anyone in the field interested in presenting at conferences or publishing in scholarly and professional journals, and sets the work of scholarly practice in the context of its vital role of influencing and shaping the future of student affairs, and in promoting continuous learning. The authors demystify the processes of producing research and scholarly work; address motivation and barriers such as time-constraints or confidence; and provide advice on developing ideas, writing, getting feedback, staying on task, identifying the appropriate outlets and venues for ideas, submitting proposals, as well as on speaking and

presentation skills. It also directs readers to books and online resources and presents the reflections of senior student affairs officers on scholarship in the profession. As the authors state, student affairs professionals are often in the best position to test the myths about what really works for college students to have access, persist, and graduate. Through their daily interactions with students they develop the grounding for theories and strategies to improve the college experience, none of which can be advanced without scholarship, without presenting and writing, and the debate that they stimulate. This book is intended for student affairs professionals at all levels. It sets the context for those starting their careers as they navigate and understand their new roles; aims to inspire mid-level professionals to present or write about their experiences and contributions; and offers senior administrators strategies to pursue their own scholarship while creating a supportive environment for their staff to do so, and develop their agency and professional growth in the process.

Communicating Project Management argues that the communication practices of project managers have necessarily become participatory, made up of complex strategies and processes solidly grounded in rhetorical concepts. The book draws on case studies across organizational contexts and combines individual experiences to investigate how project management relies on communication as teams develop products, services, and internal processes. The case studies also provide examples of how project managers can be understood and studied as writers, further arguing project managers must approach communication as designed experience

that must be intentionally inclusive. Author Benjamin Lauren illustrates to readers how teams work together to manage projects through complex coordinative communication practices, and highlights how project managers are constantly learning and evolving by analyzing where they succeed and fail. He concludes that technical and professional communicators have a pivotal role in supporting and facilitating participative approaches to communicating project management.

Given increasing global migration and the
importance of positive cross-cultural relations
across national borders, this book offers an
interdisciplinary and intercultural exploration of
identity formation. It uniquely draws from
theology, psychology, and sociology--engaging
narrative and identity theories, migration and
identity studies, and the theologies of identity
and migration--and builds on them in an
unprecedented study of international migrants to
construct an initial theology of Christian identity
in migration. New sociological research describes
the social construction of religious, ethnic, and
national identities among non-North American
evangelical graduates who entered the United States
to pursue advanced academic studies from 1983 to
2013. It provides an intercultural account of
Christian identity formation in the context of
migration, transnationalism, and globalization. It
ultimately argues that an integral component of
Christian identity-making involves the concept of
migration, of movement, toward a transformation.

The Economics of Cloud Computing An Overview
for Decision Makers Bill Williams Foreword
by George Reese, author of Cloud Application

Architectures The decision-maker's guide to cloud computing: from making the case to managing the transition This concise book delivers the insight and tools you need to make intelligent decisions about cloud computing and effectively manage the transition to this new paradigm. Bill Williams explains how cloud computing platforms are transforming business IT and helps you fully understand the economies of scale and other benefits associated with "the cloud." Williams defines and explains cloud computing platforms and technologies, analyzes the costs associated with the IT supply chain, and (using industry standard metrics) creates a process for measuring the value of implementing cloud service models. He presents realistic and up-to-date ROI and NPV calculations comparing cloud strategies with conventional investments in owned/leased hardware. Through additional examples, he addresses costs and savings related to software licensing and disaster recovery/high availability, offering even deeper practical insight into the financial impact of cloud computing. Writing for business leaders and "in-the-trenches" managers, Williams outlines the impact of

cloud computing on the IT supply chain by contrasting legacy processes and systems with cloud computing implementations. To simplify deployment, Williams presents easy-to-use tables, a decision-maker checklist, and a comprehensive collection of additional resources for further study.

- Understand today's leading cloud service and deployment models
- Identify the major characteristics of cloud computing platforms
- Use key performance/success indicators to measure IT performance and influence business strategies

Jane Austen and the Creation of Modern Fiction

Whether we realize it or not, Catholics have been deeply influenced by modernity's failed worldview. While we want to live and share our faith with joy, we struggle to do so because we unwittingly see the cosmos, the human person, and society as machines functioning independently of their Creator and of one another. If we want to bring the life-transforming effects of our faith into the world, we must first find and live real Catholicism, breaking free of the gravitational pull of modernity's worldview. A worldview is the stable, all-encompassing way in which each of us looks at reality – the pair of glasses through which we see the world around us. It makes up the grid of givens, assumptions, and presuppositions through which we view the world. It colors what we mean by God, universe, and human. Everyone has a worldview, and recognizing our worldview and the worldviews of others is crucial in our search for truth, goodness, and beauty. In *Enchanted by Eternity*, Fr. William Slattery shows how Catholicism proposes an enchanted and enchanting view of self, nature, society, and the future of each human person, created to live in a resurrected body in "the new heavens and the new earth." As this book reveals, rediscovering a truly Catholic worldview will change the way we live – and it might even change the world.

Within the past fifty years of social transformations, the institution of marriage has witnessed a portentous shrinkage in size and importance. The rates of divorce, even as they seem to be leveling off today compared with few decades ago, are still a source of much confusion. Challenges in interpersonal relations between men and women with an aim of forming a family have become even more complicated, rendering marriages extraneous. For the young adults, however, the so-called millennials, who continue to be flustered by the welter of demographic changes and sociological experiences, marked with a growing power of women in socioeconomic status, and constantly in search of explanations, a marriage (as a rite of passage) is still relevant. But if we're to salvage the institution of marriage from extinction and that of family defined by father, mother, and children, says Mokes Gama, we must critically analyze our own attitudes on patriarchal, feminism, education, and individualistic values that we embrace and adjust accordingly.

The School Services Sourcebook, Second Edition

This book illuminates the racialized nature of twenty-first century Western popular culture by exploring how discourses of race circulate in the Fantasy genre. It examines not only major

texts in the genre, but also the impact of franchises, industry, editorial and authorial practices, and fan engagements on race and representation. Approaching Fantasy as a significant element of popular culture, it visits the struggles over race, racism, and white privilege that are enacted within creative works across media and the communities which revolve around them. While scholars of Science Fiction have explored the genre's racialized constructs of possible futures, this book is the first examination of Fantasy to take up the topic of race in depth. The book's interdisciplinary approach, drawing on Literary, Cultural, Fan, and Whiteness Studies, offers a cultural history of the anxieties which haunt Western popular culture in a century eager to declare itself post-race. The beginnings of the Fantasy genre's habits of whiteness in the twentieth century are examined, with an exploration of the continuing impact of older problematic works through franchising, adaptation, and imitation. Young also discusses the major twenty-first century sub-genres which both re-use and subvert Fantasy conventions. The final chapter explores debates and anti-racist praxis in authorial and fan communities. With its multi-pronged approach and innovative methodology, this book is an important and original contribution to studies of race,

Fantasy, and twenty-first century popular culture.

Pandemics, global climate chaos, worldwide migration crises? These phenomena are provoking traumatic experiences in unprecedented ways and numbers. This book is targeted for clinicians, scientists, cultural theorists, and other scholars and students of trauma studies interested in cultivating interdisciplinary understandings of trauma and posttraumatic conditions, especially resistance, resilience, and posttraumatic growth. Following clinicians' invitation for trauma survivors to wear a philosopher's hat, to engage in creative activities, and to employ cognitive exercises to combat psychic constriction, I introduce the concept of a Literary Arts Praxis. The Praxis is built on clinical research and literature steeped in existential, phenomenological, and aesthetic themes. I argue that an educational training in a Praxis might help trauma survivors to get at trauma, as they engage in imaginative escapades, while forging alliances with characters; interpretative exercises, such as triggering emotions through phenomenological experiences; and creative writing endeavors, that include turning testimonies into imaginative stories.

A killer monkey. Suburban witchcraft. Motorcycle jousting. A cockroach invasion. Despite this enticing list of other subjects, George A. Romero is best known for the genre-defining 1968 film *Night of the Living Dead* and subsequent zombie films. The non-zombie films in his decades-long career have gotten varied degrees of critical examination but they remain underexamined compared to the Dead flicks. This book focuses on Romero's "other" work, highlighting lesser-known films such as *There's Always Vanilla* (1971) and *Bruiser* (2000), as well as more popular films such as *Martin* (1977) and *The Crazies* (1973). It examines how his body of work participates in social
