Otorhinolaryngology- Head & Neck Surgery is the latest edition of this comprehensive two-volume guide to all the sub-specialties of otorhinolaryngology, including

brand new chapters and the most recent developments in the field. The two volumes are divided into six extensive sections, covering rhinology; endoscopic sinus surgery; facial plastics; head and neck, cranial base and oncology; laryngology; otology. In this new edition, endoscopic sinus surgery is given its own section encompassing all aspects of this surgery, and an entirely new section on otology is comprised of 37 chapters including otitis media and cochlear implants. The facial plastics section provides information on dermabrasion, chemical peels, laser treatment, botox and rhinoplasty, amongst many other topics. New topics in this edition include laryngopharyngeal reflux, trauma and stenosis of the larynx, and laryngeal cancer, bringing the text firmly up to date. Illustrated in full colour across 2000 pages, this vast two-volume set is an ideal source of reference for otorhinolaryngology practitioners and residents. Key Points New edition of comprehensive two volume set covering all sub-specialties in otorhinolaryngology

The Athlete's Clock: How Biology and Time Affect Sport Performance offers an engaging, interdisciplinary consideration of some of the most compelling questions in sport and exercise science. This unique text takes a broad look at the physiological clock, offering students, researchers, coaches, and athletes a unique approach to understanding how various aspects of time affect sport performance. The Athlete's Clock explores the ways in which time and its relationship to athletic effort can optimize sport performance. Readers

can investigate challenging questions such as these: •If physiological responses to training vary rhythmically throughout the day, what is the optimal time of day for training? •If a coach thinks that a high stroke count leads to a better time in a particular swim event, should the athlete go with it? Or is it better to stick to a more intuitively normal cadence? •Do endurance athletes consciously control their pacing, or are they under the control of unconscious processes within the central nervous system? •In what ways do aging and rhythmic biological variations over time control athletic performance? •Can athletes use cognitive strategies to subdue or overcome limits imposed by biological factors out of their control? Readers will find information on the mechanisms by which time influences physiological function—such as running speeds and muscle activation—and how those

---

mechanisms can be used in extending the limits of motor activity. Chapter introductions cue readers to the ideas addressed in the chapter, and sidebars throughout present amusing or unusual examples of sport and timing within various contexts. In addition, take-home messages at the end of each chapter summarize important findings and research that readers may apply in their own lives. Addressing one of the most intriguing questions in sports, a conversational interview with athlete development expert, anthropologist, and sport scientist Bob Malina covers the timely topic of sport identification and talent development. The interview is an engaging discussion of how and when talent identification should take place and how talent development for young, promising athletes might proceed. The text also considers how time throughout one's life span alters motor function, particularly in the later years. The Athlete's

**Clock: How Biology and Time Affect Sport Performance** blends physiological, psychological, and philosophical perspectives to provide an intelligent and whimsical look at the effects of timing in sport and exercise. This text seeks to provoke thought and further research that look at the relationship between biology, time, and performance as well as an understanding of and appreciation for the intricacies of human potential.
