?Nowhere is it written that a
company, regardless of how
large it is or how successful it
might seem to be, will survive.
There have been too many
highly visible and painful
reminders of this fact over the
last several years. While
many of these companies fall
apart seemingly overnight, the
reality is that the decline is a
process that usually takes
several years and results from
a number of actions,
decisions, and behaviors that
contribute to the demise. The
purpose of this book is to
present the warning signs of
organizational decline, and
provide a method for leaders
to identify and eliminate them
before the organization enters

a death spiral. It provides detailed explanations of each warning sign, including an explanation regarding how the sign contributes to the decline, and also an assessment tool to determine the existence and extent of the signs within an organization. The principles and concepts present are equally applicable to healthcare, manufacturing, or service organizations. "A compelling and revealing account of why businesses do and do not survive. I and many of my colleagues consider it mandatory reading." Jim Schroth President J.L. Schroth Company "It is hoped that corporate executives will take heed to the message of this book to avoid (or end) death spirals of their companies, but time is running out for many formerly great companies!" This volume attempts to renew and reinvigorate critical theory by extending its range and its intellectual trajectories through strategies of inclusiveness that respect and build on parallel traditions. The authors reinterpret the work of Nietzsche, Wittgenstein and Heidegger in relation to central figures (Kant, Marcuse, Foucault) and themes of critical theory - the critique of modernity, theory of the self and the question concerning technology.

Service firms have high overhead costs which are difficult to assign to individual services. To bring transparency to their value chain, they need costing approaches that help them find their own improvements.

Markus B. Baum explores current theory and practice of value chain approaches and cost accounting to develop a costing approach with a suitable instrument for the allocation of fixed and overhead costs for a service firm. He describes the service business costing (SBC) approach. This hybrid-costing model has a

hierarchical structure in terms of consolidation and allocates cost and revenues on the lowest hierarchical level possible to ensure that all costs and income are assigned to activities from which they originated.
