visual memory triggers, and opportunities to sketch, color, and embellish! This book contains interactive visual note templates. It replaces a notebook (and possibly a textbook, depending on the way you teach), but does not replace your practice problem set. Although the pages do offer some examples and problems, you will definitely want to supplement with plenty of practice / homework on the side as well. TEACHER REVIEWS: "I could not believe the increase in engagement and understanding my students demonstrated! We love these!" "Perfect for students with Dyslexia, ADHD, or other learning disabilities." "My 8th grade summer school who are mostly boys loved coloring the notes. I'm pleasantly surprised! "Doodling helps my daughter's stress level during math lessons!" "Keeps them extremely focused!" "My students

absolutely love the doodle notes, and they feel like they retain more information." "The color coding helps them to make connections." "My students and I are loving the doodle notes. They can't believe that I am telling them that they have to doodle. And they love watching me doodle too. Not only that but I have already seen a major increase in their math scores."

### **The Number Devil**

Crown Books for Young Readers  
This book is a captivating account of a professional mathematician's experiences conducting a math circle for preschoolers in his apartment in Moscow in the 1980s. As anyone who has taught or raised young children knows, mathematical education for little kids is a real mystery. What are they capable of? What should

they learn first? How hard should they work? Should they even "work" at all? Should we push them, or just let them be? There are no correct answers to these questions, and the author deals with them in classic math-circle style: he doesn't ask and then answer a question, but shows us a problem--be it mathematical or pedagogical--and describes to us what happened. His book is a narrative about what he did, what he tried, what worked, what failed, but most important, what the kids experienced. This book does not purport to show you how to create precocious high achievers. It is just one person's story about things he tried with a half-dozen young children. Mathematicians, psychologists, educators, parents, and everybody

interested in the intellectual development in young children will find this book to be an invaluable, inspiring resource. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI). Bathtime Mathtime: Shapes Tabletop Academy Press

The international best-seller that makes mathematics a thrilling exploration. In twelve dreams, Robert, a boy who hates math, meets a Number Devil, who

leads him to discover the amazing world of numbers: infinite numbers, prime numbers, Fibonacci numbers, numbers that magically appear in triangles, and numbers that expand without . As we dream with him, we are taken further and further into mathematical theory, where ideas eventually take flight, until everyone-from those who fumble over fractions to those who solve complex equations in their heads-winds up marveling at what numbers can do. Hans Magnus Enzensberger is a true polymath, the kind of superb intellectual who loves thinking and marshals all of his charm and wit to share his passions with the world. In The Number Devil, he brings together the surreal logic of Alice in Wonderland and the existential geometry of Flatland with the kind of math everyone would love, if only they had a number devil to teach it to them.

 From the New York Times bestselling author of *One Last Stop and Red, White & Royal Blue* comes a romantic comedy about chasing down what you want, only to find what you need... Chloe Green is so close to winning. After her moms moved her from SoCal to Alabama for high school, she's spent the past four years dodging gossipy classmates and the puritanical administration of Willowgrove Christian Academy. The thing that's kept her going: winning valedictorian. Her only rival: prom queen Shara Wheeler, the principal's perfect progeny. But a month before graduation, Shara kisses Chloe and vanishes. On a furious hunt for answers, Chloe discovers she's not the only one Shara kissed. There's also Smith, Shara's longtime quarterback sweetheart, and Rory, Shara's bad boy neighbor with a crush. The three have nothing in common except Shara and the annoyingly cryptic notes she left behind, but together they must untangle Shara's trail of clues and find her. It'll be worth it, if Chloe can drag Shara back before graduation to beat her fair and square.
