most widely adopted
new physics text in
more than 50 years,
Knight's Physics for
Scientists and

published to
widespread critical
acclaim from

professors and
students. In this
eagerly awaited second
edition, Knight builds
on the research-proven
instructional techniques
he introduced, as well
as national data of
student performance, to
take student learning
even further. Knight's
unparalleled insight into
student learning
difficulties, and his
impeccably skillful
crafting of text and
figures at every level --
from macro to micro --
to address these
difficulties, results in a
uniquely effective and
accessible book,
leading students to a
deeper and better-
connected
understanding of the
concepts and more
proficient problem-

solving skills. Building on an NSF-sponsored educational research program and input from tens of thousands of student users, the second edition refines and extends the pedagogical innovations that years of use has now shown to be effective.

Unprecedented analysis of national student metadata has allowed every problem to be systematically enhanced for educational effectiveness, and to ensure problem sets of ideal topic coverage, balance of qualitative and quantitative problems, and range of difficulty and duration. The second edition comes with the latest edition

of MasteringPhysics(t) - the most advanced, educationally effective (as shown by gains in student exams scores and independent tests), and widely used online physics tutorial and homework system in the world. It provides the largest library of research-based tutorials and textbook problems available, and automatic grading of activities as wide-ranging as numerical problems with randomized values and algebraic answers to free-hand drawn graphs and free-body diagrams.
