Collaborative research embraces a multiplicity of practices in which social actors are invited to participate in the research process as co-producers of knowledge. But what is actually meant by “co-production” in collaborative research? Knowledge and Power in Collaborative Research presents a range of critical, reflexive strategies for understanding and tackling the challenges emanating from the tensions that arise in the meeting between different participants, knowledge forms and knowledge interests. The chapters anchor

discussion of ethical, epistemological and methodological questions in sustained empirical analyses of cases of collaborative knowledge production. The book covers diverse theoretical approaches such as dialogic communication theory, actor network theory, poststructuralist writing as inquiry, institutional ethnography, dialogic action research, and pragmatic action research. The empirical cases span a broad spectrum of empirical fields of social practice: health services, organisational

change, research, science communication, environmental communication in intermediary NGOs, participatory governance in relation to urban planning, and digital communication and virtual worlds.

Can international organizations be

improved by a deliberate institutional design that reflects lessons learned in peacekeeping, the protection of human rights, and environmentally sound economic development? In this incisive work, Ernst Haas examines these and other issues to delineate the conditions under which organizations change their methods for defining problems. Haas contends that international organizations change most effectively when they are able to redefine the causes underlying the problems to be

addressed. He shows that such self-reflection is possible when the expert-generated knowledge about the problems can be made to mesh with the interests of hegemonic coalitions of member governments. But usually efforts to change organizations begin as adaptive practices that owe little to a systematic questioning of past behavior. Often organizations adapt and survive without fully satisfying most of their members, as has been the case with the United Nations since 1970. When Knowledge Is Power is a wide-

ranging work that will elicit interest from political scientists, organization theorists, bureaucrats, and students of management and international administration. The book's unique perspective focuses on how private ownership and control of knowledge and data have become a major source of rent and power. The

author explains how at the one pole, these corporations concentrate income, property and power in the United States, China, and in a handful of intellectual monopolies, particularly from digital and pharmaceutical industries, while at the other pole developing countries are left further behind. The book includes detailed empirical mappings of how intellectual monopolies develop and transform knowledge from

Ronald Reagan's

most-quoted living author—George Gilder—is back with an all-new paradigm-shifting theory of capitalism that will upturn conventional wisdom, just when our economy desperately needs a new direction. America's struggling economy needs a better philosophy than the college student's lament: "I can't be out of money, I still have checks in my checkbook!" We've tried a government spending spree, and we've learned it doesn't work.

Now is the time to rededicate our country to the pursuit of free market capitalism, before we're buried under a mound of debt and unfunded entitlements. But how do we navigate between government spending that's too big to sustain and financial institutions that are "too big to fail?" In Knowledge and Power, George Gilder proposes a bold new theory on how capitalism produces wealth and how our economy can regain its vitality and its growth.

Gilder breaks away from the supply-side model of economics to present a new economic paradigm: the epic conflict between the knowledge of entrepreneurs on one side, and the blunt power of government on the other. The knowledge of entrepreneurs, and their freedom to share and use that knowledge, are the sparks that light up the economy and set its gears in motion. The power of government to regulate, stifle, manipulate, subsidize or suppress

knowledge and ideas is the inertia that slows those gears down, or keeps them from turning at all. One of the twentieth century's defining economic minds has returned with a new philosophy to carry us into the twenty-first. Knowledge and Power is a must-read for fiscal conservatives, business owners, CEOs, investors, and anyone interested in propelling America's economy to future success. The Algorithmic Society Book Tree Ranging in time

and locale, these essays, which combine theoretical argument with empirical observation, are based on research in historical and cultural settings. The contributors accept the notion that all knowledge is socially and culturally constructed and examine the contexts in which that knowledge is produced and practiced in medicine, psychiatry, epidemiology, and anthropology. -- from publisher description. **Knowledge and**

Power in the Global Economy

Bloomsbury Publishing

How does citizen activism win changes in national policy?

Which factors help to make myriad efforts by diverse actors add up to reform? What is needed to overcome setbacks, and to consolidate the smaller victories?

These questions need answers. Aid agencies have invested heavily in supporting civil society organizations as change agents in fledgling and established democracies alike.

Evidence gathered by donors, NGOs and academics demonstrates how advocacy and campaigning can reconfigure power relations and

transform governance structures at the local and global levels. In the rush to go global or stay local, however, the national policy sphere was recently neglected.

Today, there is growing recognition of the key role of champions of change inside national governments, and the potential of their engagement with citizen activists outside. These advances demand a better understanding of how national and local actors can combine approaches to simultaneously work the levers of change, and how their successes relate to actors and institutions at the international level. This book brings together eight studies of successful cases of citizen

activism for national policy changes in South Africa, Morocco, Brazil, Chile, Mexico, Turkey, India and the Philippines. They detail the dynamics and strategies that have led to the introduction, change or effective implementation of policies responding to a range of rights deficits. Drawing on influential social science theory about how political and social change occurs, the book brings new empirical insights to bear on it, both challenging and enriching current understandings.

We delegate more

and more decisions and tasks to artificial agents, machine-learning mechanisms, and algorithmic procedures or, in other words, to computational systems. Not that we are driven by powerful ambitions of colonizing the Moon, replacing humans with legions of androids, creating sci-fi scenarios à la Matrix or masterminding some sort of Person of Interest-like Machine. No, the current digital revolution based on computational power is chiefly an everyday revolution. It is therefore that much more profound, unnoticed

and widespread, for it affects our customary habits and routines and alters the very texture of our day-to-day lives. This opens a precise line of inquiry, which constitutes the basic thesis of the present text: our computational power is exercised by trying to adapt not just the world but also our representation of reality to how computationally based ICTs work. The impact of this technology is such that it does not leave things as they are: it changes the nature of agents, habits, objects and institutions and hence it subverts the

existing order, without necessarily generating a new one. I argue that this power is often not distributed in an egalitarian manner but, on the contrary, is likely to result in concentrations of wealth, in dominant positions or in unjust competitive advantages. This opens up a struggle, with respect to which the task of reaffirming the fundamental values, the guiding principles, the priorities and the rules of the game, which can transform, or attempt to transform, a fierce confrontation between enemies in a fair competition

between opponents rests on us.

Michel Foucault has become famous for a series of books that have

permanently altered our understanding of many institutions of Western society. He analyzed mental institutions in the remarkable *Madness and Civilization*; hospitals in *The Birth of the Clinic*; prisons in *Discipline and Punish*; and schools and families in *The History of Sexuality*. But the general reader as well as the specialist is apt to miss the consistent purposes that lay behind these difficult individual studies, thus losing sight of the broad

social vision and political aims that unified them. Now, in this superb set of essays and interviews, Foucault has provided a much-needed guide to Foucault. These pieces, ranging over the entire spectrum of his concerns, enabled Foucault, in his most intimate and accessible voice, to interpret the conclusions of his research in each area and to demonstrate the contribution of each to the magnificent -- and terrifying -- portrait of society

that he was patiently compiling. For, as Foucault shows, what he was always describing was the nature of power in society; not the conventional treatment of power that concentrates on powerful individuals and repressive institutions, but the much more pervasive and insidious mechanisms by which power "reaches into the very grain of individuals, touches their bodies and inserts itself into their actions and

attitudes, their discourses, learning processes and everyday lives" Foucault's investigations of prisons, schools, barracks, hospitals, factories, cities, lodgings, families, and other organized forms of social life are each a segment of one of the most astonishing intellectual enterprises of all time -- and, as this book proves, one which possesses profound implications for understanding the social control of our bodies and our minds.
