Knowledge, Normativity and Power in Academia Routledge
Ronald Reagan's most-quoted living author—George Gilder—is back with an all-new paradigm-shifting theory of capitalism that will upturn conventional wisdom, just when our economy desperately needs a new direction. America's struggling economy needs a better philosophy than the college student's lament: "I can't be out of money, I still have checks in my checkbook!" We've tried a government spending spree, and we've learned it doesn't work. Now is the time to rededicate our country to the pursuit of free market capitalism, before we're buried under a mound of debt and

unfunded entitlements. But how do we navigate between government spending that's too big to sustain and financial institutions that are "too big to fail?" In *Knowledge and Power*, George Gilder proposes a bold new theory on how capitalism produces wealth and how our economy can regain its vitality and its growth. Gilder breaks away from the supply-side model of economics to present a new economic paradigm: the epic conflict between the knowledge of entrepreneurs on one side, and the blunt power of government on the other. The knowledge of entrepreneurs, and their freedom to share and use that knowledge, are the sparks that light up the economy and set its gears in motion. The power of government to regulate, stifle, manipulate, subsidize or suppress knowledge and ideas is the inertia that slows those gears down, or keeps them from turning at all. One of the twentieth century's defining economic minds has returned with a new philosophy to carry us into the twenty-first. Knowledge and

Power is a must-read for fiscal conservatives, business owners, CEOs, investors, and anyone interested in propelling America's economy to future success.

For more than three decades Michael Apple has sought to uncover and articulate the connections among knowledge, teaching and power in education. In this collection, Michael brings together 13 of his key writings in one place, providing an overview not just of his own career but the larger development of the field.

Brown here explores America's first communications revolution--the revolution that made printed goods and public oratory widely

available and, by means of the steamboat, railroad and telegraph, sharply accelerated the pace at which information travelled. He describes the day-to-day experiences of dozens of men and women, and in the process illuminates the social dimensions of this profound, far-reaching transformation. Brown begins in Massachusetts and Virginia in the early 18th century, when public information was the precious possession of the wealthy, learned, and powerful, who used it to reinforce political order and cultural unity. Employing diaries and letters to trace how information moved through society during seven generations, he explains that by the Civil War era, cultural unity had become a thing of the past. Assisted by advanced technology and an expanding economy, Americans had created a pluralistic information marketplace in which all forms of public communication--print, oratory, and public meetings--were competing for the attention of free men and women. Knowledge is Power provides fresh

insights into the foundations of American pluralism and deepens our perspective on the character of public communications in the United States.

Few scholars have influenced the development of the study of black politics as much as Mack H. Jones. Through his writings one can trace the emergence, evolution, and maturation of the scientific study of the field.

Knowledge, Power, and Black Politics brings together difficult-to-find and out-of-print essays by this important figure. In the first part of this volume Jones demonstrates how American social science creates a misleading caricature of African American life, one that can only lead to misguided public policies. He offers an alternative frame of reference, the dominant-subordinate group model, and argues that it offers greater descriptive insights and prescriptive utility for those interested in understanding politics internal to the African American community. The framework established in the first section is used to examine a broad range of topics such as the history of black politics from the period of enslavement to the modern era and the dynamics of the civil rights movement, as well as a range of contentious public policy issues, including public welfare, affirmative action, the black underclass,

racism and multiculturalism, the black conservative movement, deracialization, presidential politics, and US foreign policy toward developing countries.

The Earth is slowly heating up, and only we, as a global community, can stop it.

With the knowledge behind what is happening, we can effect change. Using his

Ph.D in Molecular Biophysics and Biochemistry from Yale and his LL.M in Environmental and Natural Resources Law from the Northwestern College of Law at Lewis & Clark University, Dr. John Perona takes us on a journey into the science and politics of the climate crisis. Dr. Perona unites the basic science of climate change, the rise of green technologies, and the political implications of climate science to present a concise guide to the critical facts of climate change. He offers actionable tips on how to engage with scientific leaders, government officials, community leaders, and individuals like you and me. Dr. Perona offers a grounded, optimistic outlook for humanity, but only if we engage with science and act with knowledge.

Francis Bacon - a leading figure in the history of science - never made a major discovery, provided a lasting explanation of any physical phenomena or revealed any hidden laws of nature. How then can he rank as he does alongside Newton? Bacon was the first major thinker to describe how science should be done, and to explain why. Scientific knowledge should not be gathered for its own sake but for practical benefit to mankind. And Bacon promoted experimentation, coming to outline and define the rigorous procedures of the 'scientific method' that today form the very bedrock of modern scientific progress. John Henry gives a dramatic account of the background to Bacon's innovations and the sometimes unconventional sources for his ideas. Why was he so concerned to revolutionize the attitude to scientific knowledge - and why do his ideas for reform still resonate today?

Black, Indigenous, and Peoples of Color--reimagine library and information science through the lens of critical race theory. In *Knowledge Justice, Black, Indigenous, and Peoples of Color* scholars use critical race theory (CRT) to challenge the foundational principles, values, and assumptions of Library and Information

Science and Studies (LIS) in the United States. They propel CRT to center stage in LIS, to push the profession to understand and reckon with how white supremacy affects practices, services, curriculum, spaces, and policies.

This intensive social biography of a rural Moroccan judge discusses Islamic education, the concept of knowledge it embodies, and its communication from the early years of colonial rule in twentieth-century Morocco to the present. The work sensitively combines the outlooks and perceptions of the author and those of the shrewd and reflective `Abd ar-Rahman,

supplementing our knowledge of resurgent militant Islamic movements by describing other popularly supported Islamic attitudes toward the contemporary world.

The fully revised edition of this successful textbook provides a comprehensive introduction to medical sociology and an assessment of its significance for social theory and the social sciences. It includes a completely revised chapter on mental health and new chapters on the sociology of the body and on the relationship between health and risk in contemporary societies. Bryan S Turner considers the ways in which different social theorists have interpreted the experience of health and disease, and the social

relations and power structures involved in medical practice. He examines health as an aspect of social action and looks at the subject of health at three levels - the individual, the social and the societal. Among the perspectives analyzed are: Parsons' view of the 'sick role' and the patient's relation to society; Foucault's critique of medical models of madness and sexuality; Marxist and feminist debates on the relation of health and medicine to capitalism and patriarchy; and Beck's contribution to the sociological understanding of environmental pollution and hazard in the politics of health.

In Unchecked and Unbalanced, Arnold Kling provides a blueprint for those who are skeptical of political and financial elitism. At the heart of Kling's argument is the growing discrepancy between two phenomena: knowledge is becoming more diffuse, while political power is becoming more concentrated. Kling sees this knowledge/power discrepancy at the heart of the financial crisis of 2008. Financial industry executives and regulatory officials lacked the ability

to fathom the complexity of the system that had emerged. And, in response, Treasury Secretary Henry Paulson and Federal Reserve Board Chairman Ben Bernanke, said that they required still more power, including \$700 billion to purchase "toxic assets" from banks. Kling warns that increased concentration of power is a problem, not a panacea, for our modern world and suggests reforms designed to curb the growth of government and allow citizens greater control over the allocation of public goods. Societies have long sought security by identifying potentially dangerous individuals in their midst. America is surely no exception. Knowledge as Power traces the evolution of a modern technique that has come to enjoy nationwide popularity—criminal registration laws. Registration, which originated in the 1930s as a means of monitoring gangsters, went largely unused for decades before experiencing a dramatic

resurgence in the 1990s. Since then it has been complemented by community notification laws which, like the "Wanted" posters of the Frontier West, publicly disclose registrants' identifying information, involving entire communities in the criminal monitoring process. Knowledge as Power provides the first in-depth history and analysis of criminal registration and community notification laws, examining the potent forces driving their rapid nationwide proliferation in the 1990s through today, as well as exploring how the laws have affected the nation's law, society, and governance. In doing so, the book provides compelling insights into the manifold ways in which registration and notification reflect and influence life in modern America. China threat or China opportunity, like beauty, is in the eyes of the beholder. Western imaginations of China

come under close scrutiny in this book, in a new, philosophical depth seldom attempted before. Dr Pan displays in full force his analytical skills and his mastery of knowledge, both East and West. Contrary to conventional approaches, he takes a step back to exercise a powerful reflective process to watch the China watchers, with illuminating results. Dr Pan's book deserves wide and careful reading. Dr Professor Gerald Chan, University of Auckland, New Zealand

The rise of China is largely seen as either a threat or an opportunity. Chengxin Pan exposes both of these representations as expressions of Western fears and desires for certainty and predictability. His call for a more reflective and culturally sensitive understanding of China offers an important contribution to one of the big political debates of our time. Dr Professor Roland Bleiker, University of Queensland, Australia

This is a brilliant and insightful treatment of Western representations of China, with a theoretical framework

suggesting they come not only from China itself, but also the West. Although it is not the first treatment of this topic, it is innovative in considering the China threat and China opportunity: both aspects of the rise of China are of crucial importance for our times. With provocative conclusions, it is a truly path-breaking contribution to the literature. I recommend it highly!

Dr Emeritus Professor Colin Mackerras, Griffith University, Australia

Pan has produced a book which not only challenges some basic assumptions about the nature of China's rise, but more importantly forces us to rethink the very basic starting points of how we know what we know about China.

Dr Professor Shaun Breslin, University of Warwick, UK

How is the rise of China perceived in the West? Why is it often labelled as threat and/or opportunity? What are the implications of these China imageries for global politics? Taking up these important questions, this groundbreaking book argues that the dominant

Western perceptions of China's rise tell us less about China and more about Western self-imagination and its desire for certainty. Chengxin Pan expertly illustrates how this desire, masked as China's knowledge, is bound up with the political economy of fears and fantasies, thereby both informing and complicating foreign policy practice in Sino-Western relations. Insofar as this vital relationship is shaped not only by China's rise, but also by the way we conceptualise its rise, this book makes a compelling case for critical reflection on China watching. *Knowledge, Desire and Power in Global Politics* is the first systematic and deconstructive analysis of contemporary Western representation of China's rise. Setting itself apart from the mainstream empiricist literature, its critical interpretative approach and unconventional and innovative perspective will not only strongly appeal to academics, students and the broader reading public, but also likely spark debate in the field of Chinese international relations.

Michel Foucault's work is rich with implications and insights concerning spatiality, and has inspired many geographers and social scientists to develop these ideas in their own research. This book, the first to engage Foucault's geographies in detail from a wide range of perspectives, is framed around his discussions with the French geography journal *Hérodote* in the mid 1970s. The opening third of the book comprises some of Foucault's previously untranslated work on questions of space, a range of responses from French and English language commentators, and a newly translated essay by Claude Raffestin, a leading Swiss geographer. The rest of the book presents specially commissioned essays which examine the remarkable reception of Foucault's work in English and French language geography; situate Foucault's project historically; and provide a series of developments of his work in the contemporary contexts of power, biopolitics, governmentality and war.

Contributors include a number of key figures in social/spatial theory such as David Harvey, Chris Philo, Sara Mills, Nigel Thrift, John Agnew, Thomas Flynn and Matthew Hannah. Written in an open and engaging tone, the contributors discuss just what they find valuable - and frustrating - about Foucault's geographies. This is a book which will both surprise and challenge.

Knowledge Polity
As we move through our modern world, the phenomenon we call knowledge is always involved. Whether we talk of know-how, technology, innovation, politics or education, it is the concept of knowledge that ties them all together. But despite its ubiquity as a modern trope we seldom encounter knowledge in itself. How is it produced, where does it reside, and who owns it? Is knowledge always beneficial, will we know all there is to know at some point in the future, and does knowledge really equal power? This book pursues an original approach to this concept that seems to define so many aspects of modern societies. It explores the topic from a distinctly sociological perspective, and traces the many ways that knowledge is woven

into the very fabric of modern society. Semantic Systems. The Power of AI and Knowledge Graphs Campus Verlag Do governments seeking to collaborate in such international organizations as the United Nations and the World Bank ever learn to improve the performance of those organizations? Can international organizations be improved by a deliberate institutional design that reflects lessons learned in peacekeeping, the protection of human rights, and environmentally sound economic development? In this incisive work, Ernst Haas examines these and other issues to delineate the conditions under which organizations change their methods for defining problems. Haas contends that international organizations change most effectively when they are able to redefine the causes underlying the problems to be addressed. He shows that such self-reflection is possible when the expert-generated knowledge about the problems can be made to mesh with the interests of hegemonic coalitions of member governments. But usually efforts to change organizations begin as adaptive practices that owe little to a systematic questioning of past behavior. Often organizations adapt and survive without fully satisfying most of their

members, as has been the case with the United Nations since 1970.
