Memory is one of the earliest cognitive functions to show decline during aging and some neurodegenerative diseases and this decline has a social and economic impact on individuals, families, the health care system, and society as a whole. This book examines spatial, long-and short term memory loss. The aim of the first chapter is to discuss and detail several well-established spacial-memory behavioral tests, focusing specially on the MWM, describing the principal advantages or disadvantages of these memory tasks. Chapter two examines the importance of the AMPAr and its specific subunits in LTP processes as well as the formation and utilisation of spatial memory representations. Chapter three studies grizzly bears and examines their spatial and visual memory. Chapter four introduces a study to show that difficulty encoding relational information between spatial locations presented in random positions simultaneously is responsible for impaired visuospatial working memory. Chapter five describes short and long term memory functions in children with idiopathic epilepsy and assesses a novel cognitive behavioral group intervention aiming to improve memory deficits in this population whose deficits are specified and their background capacities are preserved. Chapter six studies the emergence of self-reference effect in episodic memory during early childhood. Chapter seven analyses an optical memory model of the human brain. Chapter eight studies an fNIRS study on adaptive memory. The final chapter identifies the synaptic and

structural mechanisms that drive plasticity, as well as describes the purported processes responsible for short- and long-term memory.

A new and incisive analysis of the political viability of human rights, with an in-depth investigation of its largest violation: world hunger. Gonzalez-Pelaez develops John Vincent's theory of basic human rights within the context of the international political economy and demonstrates how the right to food has become an international norm enshrined within international law. She then assesses the international normative and practical dimensions of hunger in connection with international trade and poverty. Using the society of states as the framework of analysis, she explores the potential that the current system has to correct its own anomalies, and examines the measures that can move the hunger agenda forward in order to

break through its current stagnation.

Fund Custody and Administration provides an overall perspective of investment funds without limiting its analysis to specific fund structures, as other books do. Since governance and oversight of investment funds are now major regulatory requirements, administrators and custodians must place greater emphasis on the custody and safekeeping of fund assets, on the independent and robust valuation of the assets, and on collateral management. By focusing on both the asset transactions made by the investment manager for the portfolio and on the transactions in the shares or units of the fund itself, it gives readers insights about the essential elements of investment fund management and administration, regardless of their geographical backgrounds. Explores the key stages in the investment process, from setting up a fund through its launch and operation Explains the roles of participants as well as the ways regulation affects the fund and its operation Describes the work flow associated with custody and administration procedures and processes Defines the role of compliance and risk management in the context of the fund and also how compliance requirements apply to custodians and administrators
