Looking for ways to handle the transition to a digital economy Robots, artificial intelligence, and driverless cars are no longer things of the distant future. They are with us today and will become increasingly common in coming years, along with virtual reality and digital personal assistants. As these tools advance deeper into everyday use, they raise the question—how will they transform society, the economy, and politics? If companies need fewer workers due to automation and robotics, what happens to those who once held those jobs and don't have the skills for new jobs? And since many social benefits are delivered through jobs, how are people outside the workforce for a lengthy period of time going to earn a living and get health care and social benefits? Looking past today's headlines, political scientist and cultural observer Darrell M. West argues that society needs to rethink the concept of jobs, reconfigure the social contract, move toward a system of lifetime learning, and develop a new kind of politics that can deal with economic dislocations. With the U.S. governance system in shambles because of political polarization and hyper-partisanship, dealing creatively with the transition to a fully digital economy will vex political leaders and complicate the adoption of remedies that could ease the transition pain. It is imperative that we make major adjustments in how we think about work and the social contract in order to prevent society from spiraling out of control. This book presents a number of proposals to help people deal with the transition from an industrial to a digital economy. We must broaden the concept of employment to include volunteering and parenting and pay greater attention to the opportunities for leisure time. New forms of identity will be possible when the "job" no longer defines people's sense of personal meaning, and they engage in a broader range of activities. Workers will need help throughout their lifetimes to acquire new skills and develop new job capabilities. Political reforms will be necessary to reduce polarization and restore civility so there can be open and healthy debate about where responsibility lies for economic well-being. This book is an important contribution to a discussion about tomorrow—one that needs to take place today.

Of all the great Japanese novelists, Kobe Abe was indubitably the most versatile. With The Ruined Map, he crafted a mesmerizing literary crime novel that combines the narrative suspense of Chandler with the psychological depth of Dostoevsky. Mr. Nemuro, a respected salesman, disappeared over half a year ago, but only now does his alluring yet alcoholic wife hire a private eye. The nameless detective has but two clues: a photo and a matchbook.

With these he embarks upon an ever more puzzling pursuit that leads him into the depths of Tokyo's dangerous underworld, where he begins to lose the boundaries of his own identity. Surreal, fast-paced, and hauntingly dreamlike, Abe ' s masterly novel delves into the unknowable mysteries of the human mind. Translated from the Japanese by E. Dale Saunders.

This book is an introduction to the language and standard proof methods of mathematics. It is a bridge from the computational courses (such as calculus or differential equations) that students typically encounter in their first year of college to a more abstract outlook. It lays a foundation for more theoretical courses such as topology, analysis and abstract algebra. Although it may be more meaningful to the student who has had some calculus, there is really no prerequisite other than a measure of mathematical maturity.

This book offers global perspectives from Mediterranean, Asian, Australian, and American cultures on sacred sites and their related stories in regional history. Contemporary society witnesses many travelers visiting sacred sites (temples, mountains, castles, churches, houses) throughout the world. These visits often involve discovery of new historical facts through the origin stories of the associated tribe, region, or nation. The transmission of oral tradition and myth carries on the significant meaning of those religious sites. This volume unveils multi-angle perspectives of symbolic and mystical places. The contributors describe the religio-political experiences of each regional case, and analyze the religiosity of local people as a lens through which readers can re-examine the concept of iconography, syncretism, and materialism. In addition, contributors interpret the growth of new religions as the alternative perspectives of anti-traditional religions. This new approach offers significant insight into comprehending the practical agony and sorrow of regional people in the context of contemporary history.
