Digital Filmmaking has been called the bible for professional filmmakers in the digital age. It details all of the procedural, creative, and technical aspects of pre-production, production, and post-production within a digital filmmaking environment. It examines the new digital methods and techniques that are redefining the filmmaking process, and how the evolution into digital filmmaking can be used to achieve greater creative flexibility as well as cost and time savings. The second edition includes updates and new information, including four new chapters that examine key topics like digital television and high definition television, making films using digital video, 24 P and universal mastering, and digital film projection. Digital Filmmaking provides a clear overview of the traditional filmmaking process, then goes on to illuminate the ways in which new methods can accomplish old tasks. It explains vital concepts, including digitization, compression, digital compositing, nonlinear editing, and on-set digital production and relates traditional film production and editing processes to those of digital techniques. Various filmmakers discuss their use of digital techniques to enhance the creative process in the "Industry Viewpoints" sections in each chapter.

The technology required to make photographic film has been a secret held

by a few companies. This book explains, for the first time at this level of detail, how Eastman Kodak Company makes film. Photographic film is one of the most technically sophisticated chemical products that is used in everyday life. Over 200 complex chemical components are coated on to film base in up to 18 unique, precision layers which in total are half the thickness of a human hair. This insider's view explains in simple terms how the operation works. It is a picture book with over 25 diagrams and over 130 photographs of Kodak's production materials and equipment. Sixty percent of the printed surface area is illustrations. The book is unique; nearly all the illustrations were made specifically for this book. see www.makingKODAKfilm.com

Mastering the Nikon D610 John Wiley & Sons

The advertising campaigns launched by Kodak in the early years of snapshot photography stand at the center of a shift in American domestic life that goes deeper than technological innovations in cameras and film. Before the advent of Kodak advertising in 1888, writes Nancy Martha West, Americans were much more willing to allow sorrow into the space of the domestic photograph, as evidenced by the popularity of postmortem photography in the mid-nineteenth century. Through the taking of snapshots, Kodak taught Americans to see their experiences as objects of nostalgia, to arrange their lives in such a way that painful or unpleasant aspects were systematically erased. West looks at a wide assortment of Kodak's most popular inventions and marketing strategies, including the "Kodak Girl," the momentous invention of the Brownie camera in 1900, the "Story Campaign" during World War I, and even the Vanity Kodak Ensemble, a camera introduced in 1926 that came fully equipped with lipstick. At the beginning of its campaign, Kodak advertising primarily sold the fun of taking pictures. Ads from this period celebrate the sheer pleasure of snapshot photography--the delight of handling a diminutive camera, of not worrying about developing and printing, of capturing subjects in candid moments. But after 1900, a crucial shift began to take place in the company's marketing strategy. The preservation of domestic memories became Kodak's most important mission. With the introduction of the Brownie camera at the turn of the century, the importance of home began to replace leisure activity as the subject of ads, and at the end of World War I, Americans seemed desperately to need photographs to confirm familial unity. By 1932, Kodak had become so intoxicated with the power of its own marketing that it came up with the most bizarre idea of all, the "Death Campaign." Initiated but never published, this campaign based on pictures of dead loved ones brought Kodak advertising full circle. Having launched one of the most successful campaigns in advertising history, the company did not seem to notice that selling a painful subject might be more difficult than selling momentary pleasure or nostalgia. Enhanced with over 50 reproductions of the ads themselves, 16 of them in color, Kodak and the Lens of Nostalgia vividly illustrates the fundamental changes in American culture and the function of memory in the formative years of the twentieth century.

This manual describes the Icing Research Tunnel (IRT) at the NASA Lewis Research Center and provides information for users who wish to conduct experiments in this facility. The capabilities of the tunnel test section, main drive system, speed control system, and spray bars are described. Tunnel performance maps of liquid water content as a function of median volume droplet size is presented for two types of spray nozzles at test-section velocities ranging from 86.8 to 303.9 kn (100 to 350 mph). The facility support systems, which include heated air systems, steam and service air systems, an altitude exhaust system, a force balance system, and the model electrical power system, are described. Also discussed are facility instrumentation capabilities for temperature and pressure measurements and model attitude simulation. In addition, photographic documentation and flow visualization techniques are explained, and pretest meeting formats and schedules are outlined. Tunnel-user responsibilities, personnel safety requirements, and types of test agreements are explained. The IRT is a closed-return atmospheric tunnel with a test section that is 6 ft high, 9 ft wide, and 20 ft long. It is equipped to support testing at airspeeds up to 303.9 kn (350 mph) with a 5.0-percent blockage model in the test section in a temperature and water-droplet environment that simulates natural icing conditions.
