This manual provides a harmonized approach to quality assurance (QA) in the emerging area of digital mammography. It outlines the principles of, and

specific instructions that can be used for, a QA programme for the optimal detection of early stage breast cancer within a digital environment. Intended for use by Member States that are now using digital mammography or that are assessing the implications of using digital mammography, it addresses major areas such as considerations concerning the transition from screen film to digital mammography, basic principles of QA, clinical image quality, quality control tests for radiographers, and quality control tests for medical physicists, including dosimetry assessment. Instructional materials to supplement the knowledge of professionals already working in

the field of diagnostic radiology, as well as quality control worksheets, are also provided.

This book addresses the most important postnatal features of Zika virus infection, providing important information on its epidemiology, pathology, clinical aspects, imaging and laboratory diagnosis. Since the report of a Zika virus infection epidemic in Northeastern Brazil in 2015, the world has paid close attention to this emergent disease. Historically, this has been the third outbreak of Zika

infection described (preceded by outbreaks in Micronesia and French Polynesia), but for the first time the association with congenital microcephaly and other neurological co-morbidities in infants from women infected with the Zika virus was observed. Since then, government bodies, public health agencies, medical societies and scholars have joined forces to understand this disease, and to promote its prevention and management. Currently, the relationship between Zika virus and microcephaly is well established, as well as

the most characteristic findings of congenital Zika syndrome (e.g. microcephaly, arthrogryposis, ophthalmologic and hearing abnormalities). Also, the spectrum of the disease 's severity has broadened, with less severe cases (without microcephaly) being recently recognized. Even so, there is currently a dearth of material on Zika virus infection for healthcare professional around the world. Addressing that gap, Zika In Focus – Postnatal Aspects aims to help the medical community worldwide by

presenting the most important features of Zika virus infection from a postnatal perspective. It is intended to all professionals and researchers interested in this condition, especially paediatricians, radiologists and neurologists, offering them a practical guide to recognizing congenital Zika syndrome in its many aspects and focusing on the radiological pattern of lesions that can be found from the mild to the most severe cases.

The Mammography Quality Control Manual, developed by

the ACR Committee on Quality Assurance in Mammography, is designed to help mammography facilities establish and maintain a quality control program. Included in the set are four sections, one each for radiologists, radiologic technologists, medical physicists, and a new section on clinical image quality. Each section describes step-by-step instructions on equipment testing, performance criteria, and patient positioning. All tests comply with the new MQSA regulations, which went into effect April, 1999. The manual also seeks to define the areas of responsibility for

each of the professionals involved in this important health care field. (1999 Revised edition)

The book *Beyond Marginality: Understanding the Intersection of Race, Ethnicity, Gender and Difference in Educational Leadership Research* promotes new theoretical

and conceptual frameworks for the study of race and ethnicity in educational leadership. In this volume, new generations of scholars of color are moving beyond research that has not been necessarily focused or generated by diverse groups. The authors are purposeful in transcending systemic inequities and injustices in the stratified representation of practitioners and researchers by bringing in a new movement with

innovative and impactful theoretical and conceptual frameworks in educational leadership.

This publication presents a harmonized approach to quality assurance in the field of computed tomography applied to both diagnostics and therapy. It gives a careful analysis of the principles and specific instructions that can be used for a quality assurance programme for optimal

performance and reduced patient dose in diagnostic radiology. In some cases, radiotherapy programmes are making a transition from 2-D to 3-D radiotherapy, a complex process which critically depends on accurate treatment planning. In this respect, the authors also provide detailed information about the elements needed for quality assurance testing, including those relating to accurate patient characterization as

needed for radiotherapy treatment planning.

Quality Assurance Programme for Digital Mammography

"This book is a critical interdisciplinary approach to the study of contemporary visual culture and image studies, exploring ideas about space and place and ultimately contributing to the debates about being human in the digital age. The upward and downward pull seem in a constant contest for humanity's attention. Both forces are powerful in the effects and affects they invoke. When tracing this iconological history,

Amanda du Preez's starts in the early nineteenth century, moving into the twentieth century and then spanning the whole century up to contemporary twentieth-first century screen culture and space travels. Du Preez parses the intersecting pathways between Heaven and Earth, up and down, flying and falling through the concept of being "spaced out." The idea of being "spaced out" is applied as a metaphor to trace the visual history of sublime encounters that displace Earth, gravity, locality,

belonging, home, real life and embodiment. The book will be of interest to scholars working in art history, visual culture, media and cultural studies, phenomenology, digital culture, mobility studies, and urban studies"--

Tumor biology varies at different subsites in the oral cavity, and therefore carcinoma of the gingivo-buccal sulcus (also known as Indian cancer) behaves differently from carcinoma of the tongue. Oral cancer is very often diagnosed at an advanced stage with neck

metastasis, and most cases have a guarded prognosis. Loco-regional recurrences are frequent and morbidity following treatment is considerable. However, results have improved in recent years, particularly in early and certain advanced stages, due to better imaging and case selection, improved surgical techniques, including those for reconstructive surgery, a multidisciplinary team approach and a better understanding of tumor biology and prognostic factors. This book

comprehensively and systematically reviews all these aspects of diagnostic and therapeutic advances in oral cancer, particularly discussing early detection, epidemiology, chemoprevention and current research. Written by specialists who are active leaders in basic sciences or clinical fields, the chapters address individual and collective issues in managing patients with oral cancer, and provide insights into various treatment approaches. The authors share their knowledge and

experience and provide extensive literature sources to encourage clinicians to be flexible, innovative and help them make the best, educated decisions for individual patients.
