This book gives a rigorous treatment of selected topics in classical analysis, with many applications and examples. The exposition is at the undergraduate level, building on basic principles of advanced calculus without appeal to more sophisticated techniques of complex analysis and Lebesgue integration. Among the topics covered are Fourier series and integrals, approximation theory, Stirling's formula, the gamma function, Bernoulli numbers and polynomials, the Riemann zeta function, Tauberian theorems, elliptic integrals, ramifications of the Cantor set, and a theoretical discussion of differential equations including power series solutions at regular singular points, Bessel

functions, hypergeometric functions, and Sturm comparison theory. Preliminary chapters offer rapid reviews of basic principles and further background material such as infinite products and commonly applied inequalities. This book is designed for individual study but can also serve as a text for second-semester courses in advanced calculus. Each chapter concludes with an abundance of exercises. Historical notes discuss the evolution of mathematical ideas and their relevance to physical applications. Special features are capsule scientific biographies of the major players and a gallery of portraits. Although this book is designed for undergraduate students, others may find it an accessible source of information on classical topics that underlie modern developments in pure and applied mathematics.

The early twentieth-

century film industry grew with the help of passionate entrepreneurs like Jean Desmet (1875-1956), who went from being a carnival showman to one of the Netherlands' leading cinema operators, and finally became the country's first professional film distributor. The first decades of film were its most adventurous years—a period of astonishing technological development, artistic ingenuity and creative entrepreneurship. With his cinema company, Desmet was part of the transformation of cinema from a novelty into a major popular entertainment industry. The Jean Desmet Collection, now housed at the EYE Film Institute,

Amsterdam, consists of more than 900 films, mostly from France, America, Italy and England, including masterpieces that were considered lost for decades. In this publication the story of the early days of the medium is told through films in the Desmet Collection, along with related posters, correspondence, photographs and stills.
