The integration of technological innovations, such as In-Memory Analytics, Cloud Computing, Mobile Connectivity, and Social Media, with business practice can enable significant competitive advantage. In order to embrace recent challenges and changes in the governance of IT strategies, SAP and its think tank - the Business Transformation Academy (BTA) - have jointly developed the Digital Capability Framework (DCF). Digital Enterprise Transformation: A Business-Driven Approach to Leveraging Innovative IT by Axel Uhl and Lars Alexander Gollenia outlines the DCF which comprises six specific capabilities: Innovation Management, Transformation Management, IT Excellence, Customer Centricity, Effective Knowledge Worker, and

Operational Excellence. In cooperation with the University of Applied Sciences and Arts Northwestern Switzerland, University of St. Gallen (Switzerland), Queensland University of Technology (Australia), University of Liechtenstein (Principality of Liechtenstein), and Karlsruhe Institute of Technology (Germany), SAP and the BTA have been validating each capability and the corresponding maturity models based on analyzing several 'lighthouse' case studies comprising: SAMSUNG, IBM, Finanz Informatik, The Walt Disney Company, Google Inc., HILTI AG. Digital Enterprise Transformation presents how these companies take advantage of innovative IT and how they develop their digital capabilities. On top the authors also develop and present a range of novel yet hands-on Digital Use

Cases for a number of different industries which have emerged from innovative technological trends such as: Big Data, Cloud Computing, 3D Printing and Internet of Things.

An invaluable introduction to the subject of genocide, explaining its history from pre-modern times to the present day, with a wide variety of case studies.

Recent events in the former Yugoslavia, Rwanda, East Timor and Iraq have demonstrated with appalling clarity that the threat of genocide is still a major issue within world politics. The book examines the differing interpretations of genocide from psychology, sociology, anthropology and political science and analyzes the

influence of race, ethnicity, nationalism and gender on genocides. In the final section, the author examines how we punish those responsible for waging genocide and how the international community can prevent further bloodshed.

In recent years, landscape has become increasingly recognised as a topic of central importance to a wide variety of disciplines. To a large degree this recognition has been based upon an expanding appreciation of the political

aspects of landscape, its ideological character and effects. *Landscapes and Politics* is an innovative cross-disciplinary volume of new writing which brings together, in a strategic and productive encounter, a broad variety of critical work currently being done in this field. With 28 papers and five photo essays. *Landscapes and Politics* presents material by scholars and practitioners from anthropology, archaeology, architecture, art history, cultural studies, English and American literature, film studies, fine art, geography, history, landscape architecture, philosophy, political science, and religious studies. As an important marker of current methodologies, research and practice across these different disciplinary areas *Landscapes and Politics* is an invaluable resource. It will be of interest to all those concerned with current discourses and debates

on landscape and its representation. 160 b/w illustrations

Alice Guy BlachT (1873-1968),

the world's first woman

filmmaker, was one of the key

figures in the development of

narrative film. From 1896 to

1920 she directed 400 films

(including over 100

synchronized sound films),

produced hundreds more, and

was the first--and so far the

only--woman to own and run her

own studio plant (The Solax

Studio in Fort Lee, NJ,

1910-1914). However, her role in

film history was completely

forgotten until her own memoirs

were published in 1976. This

new book tells her life story and

fills in many gaps left by the

memoirs. Guy BlachT's life and

career mirrored momentous

changes in the film industry, and

the long time-span and sheer

volume of her output makes her

films a fertile territory for the

application of new theories of

cinema history, the development

of film narrative, and feminist

film theory. The book provides a

close analysis of the one hundred

Guy BlachT films that survive,

and in the process rewrites early

cinema history.

The Fingerprint

The idea of The Fingerprint

Sourcebook originated

during a meeting in April

2002. Individuals

representing the fingerprint,

academic, and scientific

communities met in

Chicago, Illinois, for a day

and a half to discuss the

state of fingerprint

identification with a view

toward the challenges raised

by Daubert issues. The

meeting was a joint project

between the International

Association for

Identification (IAI) and

West Virginia University

(WVU). One

recommendation that came

out of that meeting was a

suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Handbook of Optical Metrology:

Principles and Applications

begins by discussing key principles and techniques before exploring practical applications of optical metrology. Designed to provide beginners with an introduction to optical metrology without sacrificing academic rigor, this comprehensive text: Covers fundamentals of light sources, lenses, prisms, and mirrors, as well as optoelectronic sensors, optical devices, and optomechanical elements Addresses interferometry, holography, and speckle methods and applications Explains Moiré

metrology and the optical heterodyne measurement method Delves into the specifics of diffraction, scattering, polarization, and near-field optics Considers applications for measuring length and size, displacement, straightness and parallelism, flatness, and three-dimensional shapes This new Second Edition is fully revised to reflect the latest developments. It also includes four new chapters—nearly 100 pages—on optical coherence tomography for industrial applications, interference microscopy for surface structure analysis, noncontact dimensional and profile metrology by video measurement, and optical metrology in manufacturing technology.

This unique and encyclopedic reference work describes the evolution of the physics of modern shock wave and detonation from the earlier and classical percussion. The history of this complex process is first reviewed in a general survey. Subsequently, the subject is treated in more detail and the book is richly illustrated in the form of a picture gallery. This book is ideal for everyone professionally interested in shock wave phenomena.

Reviews a great number of novels by Anglo-Irish women novelists that - with few exceptions - have attracted little attention from contemporary and

modern literary critics. The main focus is on the literature and its society. The disposition of this study reflects the areas of contention experienced by the Anglo-Irish of the period. Chapter 1, Land and Politics, deals with the Anglo-Irish landlords and their families. Chapter 2 is devoted to different aspects of religion. Chapter 3, Race, discusses the Celt and his presumed characteristics. The 'other' race, the English, will get some attention, as will the Protestant Anglo-Irish themselves. Chapter 4 focuses on this new ruling class, 'the new Irish'. A brief conclusion follows.

Wee felt it before in sense; but now wee know it by science.

Edward Misselden (1623) The collective effort reported in this volume is the outcome of the diffusion of the idea of diffusion as a fundamental process in society. The considerable number of disciplines represented here indicates the weight of the problem area. The editors are to be congratulated for their initiative in drawing together present thinking at a vivid meeting, now also in print. An old timer in the business has not much to add. But maybe some things, bearing in mind that a Preface is a celebration and not a review. As always with ideas it is hard to identify those who first gave shape to the idea of diffusion. In a general sense it is probably an observation as old as human self-reflection that groups of populations exchange ideas and copy habits and implements from each other. Sometimes it has even been recommended, as a Chinese proverb suggested millenia ago, "If you want to become a good farmer, look at your neighbor" .

New-Product Diffusion Models Oxford University Press, USA

Product sales, especially for new products, are influenced by many factors. These factors are both internal and external to the selling organization, and are both controllable and uncontrollable. Due to the enormous complexity of such factors, it is not surprising that product failure rates are relatively high. Indeed, new product failure rates have variously been reported as between 40 and 90 percent. Despite this multitude of factors, marketing researchers have not been deterred from developing and designing techniques to predict or explain the levels of new product sales over time. The proliferation of the internet, the necessity of developing a road map to plan the launch and exit times of various generations of a product, and the shortening of product life cycles are challenging firms to investigate market penetration, or innovation diffusion, models. These models not only provide information on new product sales over time but also provide insight on the speed with which a new product is being accepted by various buying groups, such as those identified as innovators, early adopters, early majority, late majority, and laggards. New Product Diffusion Models aims to

distill, synthesize, and integrate the best thinking that is currently available on the theory and practice of new product diffusion models. This state-of-the-art assessment includes contributions by individuals who have been at the forefront of developing and applying these models in industry. The book's twelve chapters are written by a combined total of thirty-two experts who together represent twenty-five different universities and other organizations in Australia, Europe, Hong Kong, Israel, and the United States. The book will be useful for researchers and students in marketing and technological forecasting, as well as those in other allied disciplines who study relevant aspects of innovation diffusion.

Practitioners in high-tech and consumer durable industries should also gain new insights from New Product Diffusion Models. The book is divided into five parts: I. Overview; II. Strategic, Global, and Digital Environments for Diffusion Analysis; III. Diffusion Models; IV. Estimation and V. Applications and Software. The final section includes a PC-based software program developed by Gary L. Lilien and Arvind Rangaswamy (1998) to implement the Bass diffusion model. A case on high-definition television is included to illustrate the various features of the software. A free, 15-day trial access period for the updated software can be downloaded from <http://www.mktgeng.com/diffusionbook>. Among the book's many highlights are

chapters addressing the implications posed by the internet, globalization, and production policies upon diffusion of new products and technologies in the population.

Diffusion of Technologies and Social Behavior

With the narrative punch of Jonathan Harr's *A Civil Action* and the commitment to environmental truth-telling of Erin Brockovich, *The Fluoride Deception* documents a powerful connection between big corporations, the U.S. military, and the historic reassurances of fluoride safety provided by the nation's public health establishment. *The Fluoride Deception* reads like a thriller, but one supported by two hundred pages of source notes, years of investigative reporting, scores

of scientist interviews, and archival research in places such as the newly opened files of the Manhattan Project and the Atomic Energy Commission. The book is nothing less than an exhumation of one of the great secret narratives of the industrial era: how a grim workplace poison and the most damaging environmental pollutant of the cold war was added to our drinking water and toothpaste.

The untold human story of a massacre of Korean civilians by American soldiers in the early days of the Korean War, by the Pulitzer Prize-winning journalists who uncovered it. In the fall of 1999, a team of Associated Press investigative reporters broke the news that U.S. troops had massacred a large group

of South Korean civilians early in the Korean War. On the eve of that pivotal war's 50th anniversary, their reports brought to light a story that had been suppressed for decades, confirming allegations the U.S. military had sought to dismiss. It made headlines around the world. In *The Bridge at No Gun Ri*, the team tells the larger, human story behind the incident through the eyes of the people who survived it: on the American side, the green recruits of the "good time" U.S. occupation army in Japan made up of teenagers who viewed unarmed farmers as enemies and generals who had never led men into battle; on the Korean side, the peasant families forced to flee their ancestral village caught between the invading North Koreans and the U.S. Army.

The narrative looks at victims both Korean and American; at the ordinary lives and high-level decisions that led to the fatal encounter; at the terror of the three-day slaughter; at the memories and ghosts that forever haunted the survivors. The story of No Gun Ri also illuminates the larger story of the Korean War-also known as the Forgotten War-and how an arbitrary decision to divide the country in 1945 led to the first armed conflict of the Cold War.

Everybody knows that digital technology has revolutionised our economy and our lifestyles. But how many of us really understand the drivers behind the technology - the significance of going digital; the miniaturization of circuit boards; the role of venture capital in financing the revolution; the importance of

research and development? How many of us understand what it takes to make money from innovative technologies? Should we worry about manufacturing going offshore? What is the role of India and China in the digital economy? Drawing on a lifetime's experience in the industry, as an engineer, a senior manager and as a partner in a venture capital firm, Henry Kressel offers an expert personalized answer to all these questions. He explains how the technology works, why it matters, how it is financed and what the key lessons are for public policy.
