The integration of technological innovations, such as In-Memory Analytics, Cloud Computing, Mobile Connectivity, and Social Media, with business practice can enable significant competitive advantage. In order to embrace recent challenges and changes in the governance of IT strategies, SAP and its think tank - the Business Transformation Academy (BTA) - have jointly developed the Digital Capability Framework (DCF). Digital Enterprise Transformation: A Business-Driven Approach to Leveraging Innovative IT by Axel Uhl and Lars Alexander Gollenia outlines the DCF which comprises six specific capabilities: Innovation Management, Transformation Management, IT Excellence, Customer Centricity, Effective Knowledge Worker, and Operational Excellence. In cooperation with the University of Applied Sciences and Arts Northwestern Switzerland, University of St. Gallen (Switzerland), Queensland University of Technology (Australia), University of Liechtenstein (Principality of Liechtenstein), and Karlsruhe Institute of Technology (Germany), SAP and the BTA have been validating each capability and the corresponding maturity models based on analyzing several 'lighthouse' case studies comprising: SAMSUNG, IBM, Finanz Informatik, The Walt Disney Company, Google Inc., HILTI AG. Digital Enterprise Transformation presents how these companies take advantage of innovative IT and how they develop their digital capabilities. On top the authors also develop and present a range of novel yet hands-on Digital Use Cases for a number of different industries which have emerged from innovative technological trends such as: Big Data, Cloud Computing, 3D Printing and Internet of Things.

India's association with magicians goes back thousands of years.

Conjurors and illusionists dazzled the courts of Hindu maharajas and Mughal emperors. As British dominion spread over the subcontinent, such wonder-workers became synonymous with India. Western magicians appropriated Indian attire, tricks and stage names; switching their turbans for top hats, Indian jugglers fought back and earned their grudging respect. This book tells the extraordinary story of how Indian magic descended from the realm of the gods to become part of daily ritual and popular entertainment across the globe. Recounting tales of levitating Brahmins, resurrections, prophesying monkeys and "the most famous trick never performed," *Empire of Enchantment* vividly charts Indian magic's epic journey from street to the stage. This heavily illustrated book tells the extraordinary, untold story of how Indian magic descended from the realm of the gods to become part of daily ritual and popular entertainment across the globe. Drawing on ancient religious texts, early travelers' accounts, colonial records, modern visual sources, and magicians' own testimony, *Empire of Enchantment* is a vibrant narrative of India's magical traditions, from Vedic times to the present day.

In 2001, the consequences of almost three decades of neoliberalismo made Argentina collapse. Out of the ashes of the ensuing social convulsion arose many different attempts by people to take the future into their own hands. Among them were the workers who started to put bankrupt, abandoned factories to work again in spite of the skepticism of politicians and part of society. Their successful stories surprised those who had expected them to fail and encouraged others to follow their example. In 2003, Esteban Magnani worked for Avi Lewis and Naomi Klein on a documentary on the phenomenon called The Take and wrote a book on recovered factories which

Edward Misselden (1623) The collective effort reported in this volume is the outcome of the diffusion of the idea of diffusion as a fundamental process in society. The considerable number of disciplines represented here indicates the weight of the problem area. The editors are to be congratulated for their initiative in drawing together present thinking at a vivid meeting, now also in print. An old timer in the business has not much to add. But maybe some things, bearing in mind that a Preface is a celebration and not a review. As always with ideas it is hard to identify those who first gave shape to the idea of diffusion. In a general sense it is probably an observation as old as human self-reflection that groups of populations exchange ideas and copy habits and implements from each other. Sometimes it has even been recommended, as a Chinese proverb suggested millenia ago, "If you want to become a good farmer, look at your neighbor" .

Alice Guy BlachT (1873-1968), the world's first woman filmmaker, was one of the key figures in the development of narrative film. From 1896 to 1920 she directed 400 films (including over 100 synchronized sound films), produced hundreds more, and was the first--and so far the only--woman to own and run her own studio plant (The Solax Studio in Fort Lee, NJ, 1910-1914). However, her role in film history was completely forgotten until her own memoirs were published in 1976. This new book tells her life story and fills in many gaps left by the memoirs. Guy BlachT's life and career mirrored momentous changes in the film industry, and the long time-span and sheer volume of her output makes her films a fertile territory for the application of new theories of cinema history, the development of film narrative, and feminist film theory. The book provides a close analysis of the one hundred Guy BlachT films that survive, and in the process rewrites early cinema history.

An invaluable introduction to the subject of genocide, explaining its history from pre-modern times to the present day, with a wide variety of case studies. Recent events in the former Yugoslavia, Rwanda, East Timor and Iraq have demonstrated with appalling clarity that the threat of genocide is still a major issue within world politics. The book examines the differing interpretations of genocide from psychology, sociology, anthropology and political science and analyzes the influence of race, ethnicity, nationalism and gender on genocides. In the final section, the author examines how we punish those responsible for waging genocide and how the international community can prevent further bloodshed.

History of Shock Waves, Explosions and Impact Cambridge University Press

Product sales, especially for new products, are influenced by many factors. These factors are both internal and external to the selling organization, and are both controllable and uncontrollable. Due to the enormous complexity of such factors, it is not surprising that product failure rates are relatively high. Indeed, new product failure rates have variously been reported as between 40 and 90 percent. Despite this multitude of factors, marketing researchers have not been deterred from developing and designing techniques to predict or explain the levels of new product sales over time. The proliferation of the internet, the necessity of developing a road map to plan the launch and exit times of various generations of a product, and the shortening of product life cycles are challenging firms to investigate market penetration, or innovation diffusion, models. These models not only provide information on new product sales over time but also provide insight on the speed with which a new product is being accepted by various buying groups, such as those identified as innovators, early adopters, early majority, late majority, and laggards. New Product Diffusion Models aims to distill, synthesize, and integrate the best thinking that is currently available on the theory and practice of new product diffusion models. This state-of-the-art assessment includes contributions by individuals who have been at the forefront of developing and applying these models in industry. The book's twelve chapters are written by a combined total of thirty-two experts who together represent twenty-five different universities and other organizations in Australia, Europe, Hong Kong, Israel, and the United States. The book will be useful for researchers and students in marketing and technological forecasting, as well as those in other allied disciplines who study relevant aspects of innovation diffusion. Practitioners in high-tech and consumer durable industries should also gain new insights from New Product Diffusion Models. The book is divided into five parts: I. Overview; II. Strategic, Global, and Digital Environments for Diffusion Analysis; III. Diffusion Models; IV. Estimation and V. Applications and Software. The final section includes a PC-based software program developed by Gary L. Lilien and Arvind Rangaswamy (1998) to implement the Bass diffusion model. A case on high-definition television is included to illustrate the various features of the software. A free, 15-day trial access period for the updated software can be downloaded from <http://www.mktgeng.com/diffusionbook>. Among the book's many highlights are chapters addressing the implications posed by the internet, globalization, and production policies upon diffusion of new products and technologies in the population.
