The principle of Access to Knowledge (A2K) has become a common reference point for a diverse set of agendas that all

hope to realize technological and human potential by making knowledge more accessible. This book is a history of international copyright focused on principles of A2K and their proponents. Whilst debate and discussion so far has covered the perspectives of major western countries, the author's fresh approach to the topic considers emerging countries and NGOs, who have fought for the principles of A2K that are now fundamental to the system. Written in a clear and accessible style, the book connects copyright history to current problems, issues and

events.

The editors of this volume have honored me by their invitation to write its Fore word, an invitation extended because of my editing a book on the maternal behavior of mammals in 1963. Much as I would like to think that I had opened a new area of study-and so played some part in the appearance of this fine new collection of chapters-the facts are quite otherwise. That in 1963 I could assemble the efforts of many distinguished investigators shows that the topic had already engaged their attention, and had for some years past. But even then, the topic had origins extending much

farther into the past, to mention only Wiesner and Sheard's book *Maternal Behavior in the Rat* of 1933. Nevertheless, in 1963 it seemed to me that the study of maternal care in mammals had lagged behind the study of other kinds of social behavior. The present volume does much to establish parental care of the young as a topic central to an understanding of the relation between ontogeny and phylogeny, to the development of the young, to the social organization of the species, and to its preservation. It may now be seen not only as interesting but as a most significant pattern of behavior among mammals.
