Editor, 2012Dear Reader, Thank you for picking up this magazine. Inside you will find a world of wonders. If you are like most people you will flick through and look at the art first. We are proud to feature gallery prints from iconic photographer Kim Weston. The art editor and I met Kim a few years ago at the Henry Miller Library over dinner, and have been trying to get his beautiful photographs in our magazine ever since. It is thanks to the dogged tenacity of River Tabor that we are able to feature work by an astounding member of the Weston dynasty. Tim Youd did an entire art exhibit based on a passage out of Henry Miller's Tropic of Capricorn.

We have a poem by Big Sur visitor and raconteur Richard Brautigan. This poem seems to embody the internal landscape of the author. We are fortunate to have so many talented people in the planisphere that is the Henry Miller Memorial library, and are happy to have so many West Coast writers and artists featured in this issue. The Library is an amazing cultural venue, a local's hang out, a bookstore, a concert venue, and a film theatre, but it is also a fragile watershed. Our commitment to keeping this delicate ecosystem in check is part of why this year we have launched our capital fundraising campaign, in an effort to retrofit Emil White's little cabin

into a place that hosts such acts as Thurston Moore of Sonic Youth. I met Thurston on a damp afternoon at the library. I am not an interviewer per say, but I do love listening to people's stories. Thurston Moore and I talked about poetry and art under a persimmon tree, the interview featured herein is the fruit...The East Coast is always well represented since half of our editors live in Brooklyn, which I like to call the poetry capital of the U.S. of A. We have the wondrous poets Leah Umansky, J. Hope Stein, Joanna Penn Cooper and Angela Wong featured. Enjoy! Maria Garcia Teutsch

So you know about engines. And you may have read some of the Haynes manuals, the "Holley Carburetors" and the "How-to..." books. Maybe you know how to repair and put together an engine. The next step is to tune your engine, so it runs perfectly and produces the most power. If that engine has

---

non-stock components, the books mentioned above can't help you. When it comes to tuning the ignition and the carburetor on a performance engine, including how the different adjustments affect each other, there has never been a single source of reliable, easy-to-understand information. Now there is. This book takes you through the various steps in the process of adjusting your ignition and your carburetor, including the very important sequence in which they must be done. It deals with questions like: If I turn the idle mixture screw out, and the engine responds like this, should I then turn the screw more and in which direction? How do I ensure absolutely optimum jetting of my carburetor? How do I create a distributor curve that optimizes ignition timing at idle, part throttle and wide open throttle? All the questions you've come across when trying to adjust your engine for performance are answered here. The simple step-by-step instructions in this book only require your time and effort. Techniques like plug

---

reading and using a vacuum gauge are described in detail. Only standard tools are needed-no dyno or anything like that is required. In addition to engine tuning, this book contains advice on choosing the right parts, to ensure that they will complement each other, not work against each other. Plus there are many tips on troubleshooting

ng and on winning races. Finally the book also contains special tuning tips for boat engines, including a chapter on the differences between a car engine and a boat engine. This is the last book on engine tuning you'll ever need.
