Dr. Ray Vander Weele embarks on a voyage of discovery and celebrates life's joys, challenges, and unexpected turns in this memoir. He shares the grief of losing a child and the anguish of saying goodbye to a wife claimed by Alzheimer's—as well as the thrill of opening himself up to a new love and a new beginning later in life. He writes about the awkwardness of adolescence, living through the Great Depression, World War II, the Korean War, and Vietnam; and surviving scarlet fever, heart surgery and cancer—and how avoiding polio and covid-19 helped create a new appreciation for life. Some of what he recalls were mountains: obstacles that, in retrospect, it is hard to believe he overcame. Other challenges were boulders or even pebbles—although it was not always clear at the time which was which. Join the author as he takes stock of the past and prompts you to examine how you've lived your life ... and what you might do to enhance the time you have left.

advanced ones including Direct and Large Eddy Simulation. It also examines turbulence aspects which are not treated in most existing books on this subject, such as turbulence in free and mixed convection, transient turbulence and transition to turbulence. The book adopts the tensor notation, which is the most appropriate to deal with intrinsically tensor quantities such as stresses and strain rates, and for those who are not familiar with it an Appendix on tensor algebra and tensor notation are provided.
