"These notes are about the process of design: the process of inventing things which display new physical order, organization, form, in response to function." This book, opening with these words, presents an entirely new theory of the process of design. In the first part of the book, Christopher Alexander discusses the

process by which a form is adapted to the context of human needs and demands that has called it into being. He shows that such an adaptive process will be successful only if it proceeds piecemeal instead of all at once. It is for this reason that forms from traditional un-self-conscious cultures, molded not by designers but by the slow pattern of changes within tradition, are so beautifully organized and adapted. When the designer, in our own self-conscious culture, is called on to create a form that is adapted to its context he is unsuccessful, because the preconceived categories out of which he builds his picture of the problem do not correspond to the inherent components of the problem, and therefore lead only to the arbitrariness, willfulness, and lack of understanding which plague

the design of modern buildings and modern cities. In the second part, Mr. Alexander presents a method by which the designer may bring his full creative imagination into play, and yet avoid the traps of irrelevant preconception. He shows that, whenever a problem is stated, it is possible to ignore existing concepts and to create new concepts, out of the structure of the problem itself, which do correspond correctly to what he calls the subsystems of the adaptive process. By treating each of these subsystems as a separate subproblem, the designer can translate the new concepts into form. The form, because of the process, will be well-adapted to its context, non-arbitrary, and correct. The mathematics underlying this method, based mainly on set theory, is fully developed

in a long appendix. Another appendix demonstrates the application of the method to the design of an Indian village.

First published in 1998, this volume explores Singapore as an ideal case study for the examination of the management of postcoloniality, social diversity and the pursuit of economic growth with ethnic harmony. Singapore has, since independence, evolved a unique mix of state directed capitalism, revamped Confucianism and a social order based on an ideology of multiracialism. The result has been a State with enormous sociological diversity held together by the need to create a unified political order out of a population of immigrants of very diverse origins. This

has placed the management of multiethnicity at the heart of political discourse and social policy. This book examines critically the operation of ethnicity in post-independence Singapore, the social policies that have been evolved to manage it, and the implications of the Singapore experiment for other plural societies in Asia and elsewhere.

The term arthrogyriposis describes a range of congenital contractures that lead to childhood deformities. It encompasses a number of syndromes and sporadic deformities that are rare individually but collectively are not uncommon. Yet, the existing medical literature

on arthrogyriposis is sparse and often confusing. The aim of this book is to provide individuals affected with arthrogyriposis, their families, and health care professionals with a helpful guide to better understand the condition and its therapy. With this goal in mind, the editors have taken great care to ensure that the presentation of complex clinical information is at once scientifically accurate, patient oriented, and accessible to readers without a medical background. The book is authored primarily by members of the medical staff of the Arthrogyriposis Clinic at Children's Hospital and Medical Center in Seattle, Washington, one of the leading teams in the management of the condition, and will be an invaluable resource for both

health care professionals and families of affected individuals.
