Electrical Engineering 101 covers the basic theory and practice of electronics, starting by answering the question "What is electricity?" It goes on to explain the fundamental principles and components, relating them constantly to real-world examples. Sections on tools and troubleshooting give engineers deeper understanding and the know-how to create and maintain their own electronic design projects. Something Borrowed, Someone Dead continues the tradition in M. C. Beaton's beloved Agatha Raisin cozy mystery series—now a hit show on Acorn TV and public television. Gloria French was a jolly widow with dyed blonde hair, a raucous laugh and rosy cheeks. When she first moved from London to the charming Cotswolds hills, she was heartily welcomed. She seemed a do-gooder par excellence, raising funds for the church and caring for the elderly. But she had a nasty habit of borrowing things and not giving them back, just small things, a teapot here, a set of silverware there. So it's quite the shock when she is found dead, murdered by a poisoned bottle of elderberry wine. Afraid the murder will be a blight on the small town, Parish councillor, Jerry Tarrant, hires private detective Agatha Raisin to track down the murderer. But the village is secretive and the residents resent Agatha's investigation. Of course that doesn't stop the ever-persistent Agatha from investigating and sticking her nose where no one wants it—especially as the suspect list grows. And, as if it isn't enough that Agatha's ex has reentered the picture, the murderer is now targeting Agatha! With M.C. Beaton's Something Borrowed, Someone Dead the bossy, vain, and absolutely irresistible, Agatha Raisin continues to be a fan favorite.

Letter From the Editor, 2012Dear Reader, Thank you for picking up this magazine. Inside you will find a world of wonders. If you are like most people you will flick through and look at the art first. We are proud to feature gallery prints from iconic photographer Kim Weston. The art editor and I met Kim a few years ago at the Henry Miller Library over dinner, and have been trying to get his beautiful photographs in our magazine ever since. It is thanks to the dogged tenacity of River Tabor that we are able to feature work by an astounding member of the Weston dynasty. Tim Youd did an entire art exhibit based on a passage out of Henry Miller's Tropic of Capricorn. We have a poem by Big Sur visitor and raconteur Richard Brautigan. This poem seems to embody the internal landscape of the author. We are fortunate to have so many talented people in the planisphere that is the Henry Miller Memorial library, and are happy to have so many West Coast writers and artists featured in this issue. The Library is an amazing cultural venue, a local's hang out, a bookstore, a concert venue, and a film theatre, but it is also a fragile watershed. Our commitment to keeping this delicate ecosystem in check is part of why this year we have launched into our capital fundraising campaign, in an effort to retrofit Emil White's little cabin into a place that hosts such acts as Thurston Moore of Sonic Youth. I met Thurston on a damp afternoon at the library. I am not an interviewer per say, but I do love listening to people's stories. Thurston Moore and I talked about poetry and art under a persimmon tree, the interview featured herein is the fruit...The East Coast is always well represented since half of our editors live in Brooklyn, which I like to call the poetry capital of the U.S. of A. We have the wondrous poets Leah Umansky, J. Hope Stein, Joanna Penn Cooper and Angela Wong featured Enjoy! Maria Garcia Teutsch

Most projects in Landscape Ecology, at some point, define a species-habitat association. These models are inherently spatial, dealing with landscapes and their configurations. Whether coding behavioral rules for dispersal of simulated organisms through simulated landscapes, or designing the sampling extent of field surveys and experiments in real landscapes, landscape ecologists must make assumptions about how organisms experience and utilize the landscape. These convenient working postulates allow modelers to project the model in time and space, yet rarely are they explicitly considered. The early years of landscape ecology necessarily focused on the evolution of effective data sources, metrics, and statistical approaches that could truly capture the spatial and temporal patterns and processes of interest. Now that these tools are well established, we reflect on the ecological theories that underpin the assumptions commonly made during species distribution modeling and mapping. This is crucial for applying models to questions of global sustainability. Due to the inherent use of GIS for much of this kind of research, and as several authors' research involves the production of multicolored map figures, there would be an 8-page color insert. Additional color figures could be made available through a digital archive, or by cost contributions of the chapter authors. Where applicable, would be relevant chapters' GIS data and model code available through a digital archive. The practice of data and code sharing is becoming standard in GIS studies, is an inherent method of this book, and will serve to add additional research value to the book for both academic and practitioner audiences.
