Pathwise estimation and inference for diffusion market models discusses contemporary techniques for inferring, from options and bond prices, the market participants' aggregate view on important financial parameters such as implied volatility, discount rate, future interest rate, and their uncertainty thereof. The focus is on the pathwise inference methods that are applicable to a sole path of the observed prices and do not require the observation of an ensemble of such paths. This book is pitched at the level of senior undergraduate students undertaking research at honors year, and postgraduate candidates undertaking Master's or PhD degree by research. From a research perspective, this book reaches out to academic researchers from backgrounds as diverse as mathematics and probability, econometrics and statistics, and computational mathematics and optimization whose interest lie in analysis and modelling of financial market data from a multi-disciplinary approach. Additionally, this book is also aimed at financial market practitioners participating in capital market

facing businesses who seek to keep abreast with and draw inspiration from novel approaches in market data analysis. The first two chapters of the book contains introductory material on stochastic analysis and the classical diffusion stock market models. The remaining chapters discuss more special stock and bond market models and special methods of pathwise inference for market parameter for different models. The final chapter describes applications of numerical methods of inference of bond market parameters to forecasting of short rate. Nikolai Dokuchaev is an associate professor in Mathematics and Statistics at Curtin University. His research interests include mathematical and statistical finance, stochastic analysis, PDEs, control, and signal processing. Lin Yee Hin is a practitioner in the capital market facing industry. His research interests include econometrics, non-parametric regression, and scientific computing.

Sociology for nurses 2/e McGraw Hill Professional

A satirical comedy featuring Christopher Columbus, a tech billionaire, and a global delusion. Mel Winterbourne is the founder of a small, single-issue charity in the obscure field of mapmaking. Its success in achieving modest aims attracts the attention of handsome tech billionaire Joey Talavera, who evicts Mel and hijacks her charity for his own ends: to convince the world that the earth is flat. Although his chances of doing so seem slim, Flat Earthery is an idea whose time has come. With the historical reputation of

Christopher Columbus in free-fall, old-style 'globalism' becomes heretical for a new generation of angry, anti-Establishment free-thinkers. Teachers, politicians, and celebrities face ruin if they refuse to sign up to the new orthodoxy. For Mel, something must be done. Teaming up with a pariah tabloid journalist and a faded writer of gross-out movie comedies, she sets out to challenge Talavera and his deranged beliefs. Will history and the billionaire's own family origins be their unexpected ally? Using his trademark mix of history and satire to poke fun at modern foibles, Simon Edge is at his razor-sharp best in a caper that may be much more relevant than you think.

Flexible packaging today has one of the highest growth rates across all printing sectors, achieving an annual global growth of close to five percent. Important trends include smaller run lengths, a requirement for multi-versions and variations, personalization and a growing interest in adding in-line value ? all

undoubted opportunities for narrow- and mid-web label converters (using both flexo and digital technology) to capture a growing portion of the flexibles market. Jobs with the shortest run sizes are in pouches of any kind, as well as in single serve and one-dose packs and sachets. These are key areas where label converters can most readily enter the flexible packaging market. Indeed, narrower and mid-web conventional and digital printing has effectively opened up the market to a whole range of new customers who have never previously had a solution for short-run flexible packaging orders. But it's not all quite straightforward for a label converter to move into flexible packaging. They need to have a comprehensive understanding of paper, foil and filmic substrates ? as well as multi-layer constructions and barrier properties, of pack sealing, and of the specific user requirements needed for the many different types of liquids, powders, gels, creams and solids that have to be packaged. Pre-press requirements are different, inks have to withstand sealing, web- and sealing widths are important, co-efficient of slip can be critical, while a good understanding of form, fill and seal machines is ideal. This book has set out to provide both the knowledge and expert guidance for label and other converters looking to enter or expand their production into flexible packaging ? a key stepping stone to success. Chapters include: Flexible packaging - an introduction Paper and board, metallic foil, films and multi-layer constructions Types of flexible packaging and special constructions Pre-press, printing and converting Understanding forming, filling, sealing and lidding operations Markets, applications and opportunities

Enter the "fascinating" and frightening world of modern forensic psychology as experienced by one of the most respected practitioners in the field today (Robert K. Tanenbaum, New York Times-bestselling author). At the heart of countless crimes lie the mysteries of the human mind. In this eye-opening book, Dr. Cheryl Paradis draws back the curtain on the fascinating world of forensic psychology, and revisits the most notorious and puzzling cases she has handled in her multifaceted career. Her riveting, sometimes shocking stories reveal the crucial and often surprising role forensic psychology plays in the pursuit of justice—in which the accused may truly believe their own bizarre lies, creating a world that pushes them into committing horrific, violent crimes. Join Dr. Paradis in a stark concrete cell with the indicted as she takes on the daunting task of mapping the suspect's madness or exposing it as fakery. Take a front-row seat in a tense, packed courtroom, where her testimony can determine an individual's fate—or if justice will be truly served. The criminal thought process has never been so intimately revealed—or so darkly

compelling—as in this “excellent and entertaining” journey into the darkest corners of the human mind (Booklist).

Friedman and Michael Mandelbaum, on sale September 5th, 2011. Weaving new information into his overall thesis, and answering the questions he has been most frequently asked by parents across the country, this third edition also

The World Is Flat 3.0 is an essential update on globalization, its opportunities for individual empowerment, its achievements at lifting millions out of poverty, and its drawbacks--environmental, social, and political, powerfully illuminated by the Pulitzer Prize--winning author of The Lexus and the Olive Tree.
