Research on the topic of clusters and industrial districts is very extensive. However, most of it has focused more on understanding the past than on trying to map out the future. The aim of this book is to fill this gap by identifying and discussing the main research topics that populate the current scientific debate and highlight the emergent lines of research that will constitute the future research agenda. It does so by drawing on the debate started with the "rethinking clusters" workshops, which in a short time have become a rich place for discussion among cluster scholars around the world. Rethinking Clusters: Towards a New Research Agenda for Cluster Research collects contributions from authoritative colleagues, who cover a number of relevant and timely issues, such as the territorial roots of radical innovation processes, new ways of understanding and measuring the role of place in economic development, path renewal, internationalization and entrepreneurship. The final section is devoted to the critical analysis of policies that support smart specialization. The chapters in this book were originally published as a special issue of the journal European Planning Studies.

This study examines France's determination to remain aloof and unaffected as the world economy threatens the French way of doing business. Describing the difficulty in initiating change in French organizations, the author tells of the obstacles he encountered in attempting to modernize the working practices of a Paris firm. His observations are based upon customs and habits peculiar to the French, yet they apply equally to all foreign cultures. Management methods,

attitudes to the outside world, and the historic roots of the French mentality are viewed and explained anecdotally, based on the author's experience of living and working in France, and are accompanied by humorous illustrations.

In Learning with Information Systems the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.
