In this book, the technical explanation of the nature of analog sound creation is followed by the story of its birth and its subsequent development by various designers, manufacturers and performers. The individual components of analog sound creation are then examined in detail, with step by step examples of sound creation techniques. Then the modern imitative analog instruments are examined, again with detailed instructions for programming and using them, and the book is completed with appendices listing the major instrument lines available, hints on values and purchasing, other sources of information, and a discography of readily available recordings which give good examples of analog sound synthesis. The CD which accompanies the book gives many examples of analog sound creation basics as well as more advanced techniques, and of the abilities of the

individual instruments associated with classical and with imitative analog sound synthesis.

While Rabindranath Tagore needs no introduction, his place as a critic has been partially eclipsed by his fame as a creative writer. One of the founders of modern Bengali critical thought and among the most perceptive analysts in the language, his corpus of critical writings spanning almost his entire literary career, comprises more than one hundred pieces of varying length. This volume is part of The Oxford Tagore Translations series, a prestigious project undertaken by Oxford University Press in collaboration with Visva-Bharati to publish English translations of a wide range of Tagore's writings including his poetry, non-fiction prose, and fiction. The volume includes essays which reveal Tagore's engagement with the central issues of criticism, as well as with literary theory and aesthetics. Bringing together an authoritative selection of Tagore's critical writings, most of which have not been translated before, this book also includes a detailed introduction and extensive notes.

Research on the multifaceted aspects of modeling, analysis, and synthesis of - man gesture is receiving growing interest from both the academic and industrial communities. On one hand, recent scientific developments on cognition, on - fect/emotion, on multimodal interfaces, and on multimedia have opened new perspectives on the integration of more sophisticated models of gesture in c- putersystems. On the other hand, the consolidation of new technologies enabling “disappearing” computers and (multimodal) interfaces to be integrated into the natural environments of users are making it realistic to consider tackling the complex meaning and subtleties of human gesture in multimedia systems, - abling a deeper, user-centered,

enhanced physical participation and experience in the human-machine interaction process. The research programs supported by the European Commission and several national institutions and governments individuated in recent years strategic fields strictly concerned with gesture research. For example, the DG Information Society of the European Commission (www.cordis.lu/ist) supports several initiatives, such as the “Disappearing Computer” and “Presence” EU-IST FET (Future and Emerging Technologies), the IST program “Interfaces & Enhanced Audio-Visual Services” (see for example the project MEGA, Multisensory - pressive Gesture Applications, www.megaproject.org), and the IST strategic - jective “Multimodal Interfaces.” Several EC projects and other funded research are represented in the chapters of this book.

A wider range of applications can benefit from advances in research on gesture, from consolidated areas such as surveillance to new or emerging fields such as therapy and rehabilitation, home consumer goods, entertainment, and audio-visual, cultural and artistic applications, just to mention only a few of them.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

A major force in the American automobile scene through the 1950s, Packard made a mark on American advertising as well. The cars themselves seemed built for promotion—the red hexagon in the hubcap, the yoke grille, and the half-arrow belt-line molding acted as a logo of sorts, setting a new standard in visual continuity and branding. The company ' s image became so firmly established, in fact, that Packard eventually ran advertisements which pictured the cars but purposely omitted the name, instead asking readers to “ guess what name it bears. ” This book traces Packard ' s advertising history from 1900 through 1958, based on original research that includes several first-hand interviews with the people who made it happen. Filled with reproductions of Packard ads (some in color), the book looks beyond the surface to examine how the advertisements reflect and interpret the company ' s management and business convictions, how they were influenced by business conditions and competitive pressure, and how they changed with the times.
