Music for Sight Singing is structured around organized melodies drawn from the literature of composed music and a wide range of the world's folk music. Real music exercises allow readers to practice sight singing and develop their "mind's ear" -- the ability to imagine how music sounds without first playing it on an instrument. The ninth edition continues to introduce a host of important musical considerations beyond pitch and rhythm- including dynamics, accents, articulations, slurs, repeat signs, and tempo markings. The book's arrangement of simple to complex exercises lays the foundations for success. Learning Goals Upon completing this book, readers will be able to: Fluently read rhythms in

simple and compound meters, including those in relatively unusual, irregular, or changing meter signatures. Sight sing melodies in any major or minor key, and in any diatonic mode. Effortlessly read all four common clefs. Understand common musical symbols and terms. Recognize and sing important harmonic features such as dominant seventh and Neapolitan chords. Improvise effectively from a variety of background structures such as a harmonic progression or an underlying contrapuntal framework. Negotiate chromatic passages from simple embellishing tones and tonicizations to modulations to post-tonal music. NOTE: MySearchLab does not come automatically packaged with this text. This book will come as a joy, a revelation, a warm reassurance. From this one book one might well learn less about harmony than about form, about aesthetics, even about life. Some will accuse Schoenberg of not concentrating on the topic at hand, but such an accusation, though well-founded, would miss the point of Theory of Harmony, because the heart and soul of the book is to be found in his vivid and penetrating digressions. They are the fascinating reflections of a great and humane musician who was a born writer as well. - from the book.

McGraw-Hill Humanities/Social Sciences/Languages

In this book, David Temperley addresses a fundamental question about music cognition: how do we extract basic kinds of musical information, such as meter, phrase structure, counterpoint, pitch spelling, harmony, and key from music as we hear it? Taking a computational approach, Temperley develops models for generating these aspects of musical structure. The models he proposes are based on preference rules, which are criteria for evaluating a possible structural analysis of a piece of music. A preference rule system evaluates many possible interpretations and chooses the one that best satisfies the rules. After an introductory chapter, Temperley presents preference rule systems for generating six basic kinds of musical structure: meter, phrase structure, contrapuntal structure, harmony, and key, as well as pitch spelling (the labeling of pitch events with spellings such as A flat or G sharp). He suggests that preference rule systems not only show how musical structures are inferred, but also shed light on other aspects of music. He substantiates this claim with discussions of musical ambiguity, retrospective revision, expectation, and music outside the Western canon (rock and traditional African music). He proposes a framework for the description of musical styles based on preference rule systems and explores the relevance of preference rule systems to higher-level aspects of music, such as musical

schemata, narrative and drama, and musical tension. **Tonal Harmony** McGraw-Hill Humanities Social Sciences & World Languages

Approaches to Meaning in Music presents a survey of the problems and issues inherent in pursuing meaning and signification in music, and attempts to rectify the conundrums that have plagued philosophers, artists, and theorists since the time of Pythagoras. This collection brings together essays that reflect a variety of diverse perspectives on approaches to musical meaning. Established music theorists and musicologists cover topics including musical aspect and temporality, collage, borrowing and association, musical symbols and creative mythopoesis, the articulation of silence, the mutual interaction of cultural and music-artistic phenomena, and the analysis of gesture. Contributors are Byron Almon, J. Peter Burkholder, Nicholas Cook, Robert S. Hatten, Patrick McCreless, Jann Pasler, and Edward Pearsall.

Music Theory Through Musical Theatre Indiana University Press

Theory Essentials for Today's Musician offers a review of music theory that speaks directly and engagingly to modern students. Rooted in the tested pedagogy of *Theory for Today's Musician*, the authors have distilled and reorganized the concepts from the thirty-three chapters of their original textbook into twenty-one succinct, modular chapters that move from the core elements of harmony to further topics in form and 20th-century music.

A broad coverage of topics and musical styles—including examples drawn from popular music—is organized into four key parts: Basic Tools Chromatic Harmony Form and Analysis The 20th Century and Beyond *Theory Essentials* features clear and jargon-free (yet rigorous) explanations appropriate for students at all levels, ensuring comprehension of concepts that are often confusing or obscure. An accompanying workbook provides corresponding exercises, while a companion website presents streaming audio examples. This concise and reorganized all-in-one package—which can be covered in a single semester for a graduate review, or serve as the backbone for a briefer undergraduate survey—provides a comprehensive, flexible foundation in the vital concepts needed to analyze music.
