Gottlob Frege (1848 – 1925)
was unquestionably one of the
most important philosophers of
all time. He trained as a
mathematician, and his work
in philosophy started as an
attempt to provide an
explanation of the truths of
arithmetic, but in the course of
this attempt he not only

founded modern logic but also
had to address fundamental
questions in the philosophy of
language and philosophical
logic. Frege is generally seen
(along with Russell and
Wittgenstein) as one of the
fathers of the analytic method,
which dominated philosophy in
English-speaking countries for
most of the twentieth century.
His work is studied today not
just for its historical importance
but also because many of his
ideas are still seen as relevant to
current debates in the
philosophies of logic, language,
mathematics and the mind.
The Cambridge Companion to

Frege provides a route into this lively area of research.

Discipline in Early Modern Calvinism, Max Engammare explores how the sixteenth-century Protestant reformers of Geneva, France, London, and Bern internalized a new concept of time. Applying a moral and spiritual code to the course of the day, they regulated their relationship with time, which was, in essence, a new relationship with God. As Calvin constantly reminded his followers, God watches his faithful every minute. Come Judgment Day, the faithful in turn will have to account for each minute. Engammare argues that the inhabitants of Calvin's Geneva invented the new habit of being on time, a

practice unknown in Antiquity. It was also fundamentally different from notions of time in the monastic world of the medieval period and unknown to contemporaries such as Erasmus, Vives, the early Jesuits, Rabelais, Ronsard, or Montaigne. Engammare shows that punctuality did not proceed from technical innovation. Rather, punctuality was above all a spiritual, social, and disciplinary virtue.

theorising it as a historically specific apparatus of biopower. Through the use of a diverse mix of historical and contemporary documents, the book explores how the problematisation of intersex infant genitalia in 1950s psychiatry propelled the emergence of the gender apparatus in order to socialise sexed individuals into the ideal productive and reproductive subjects of White, middle-class postwar America. The Book of Dog Poems

Cambridge University Press
Representation and visualisation, reality and fiction form the cornerstones of Ana Torfs' installations which consist of projected images and texts. In precisely choreographed audio visual constellations Torfs brings to

life literary, historical and political material. In these projects the artist works with actors who embody their roles in a demonstratively matter-of-fact and functional way. A famous one act play by the symbolist poet Maurice Maeterlinck, testimonies from Rosa Luxemburg and Karl Liebknecht's murder trial and also dialogues from a film classic by Roberto Rossellini served as starting points for roomfilling installations such as *The Intruder*, 2004, *Anatomy*, 2006, or *Displacement*, 2009. Torfs has been practising and developing her method of subtly dissecting and superimposing places, people,

voices and atmospheres for over 15 years. In doing so, she draws from the repertoire of dramatic, photographic and cinematic techniques. Personal experiences and global dimensions merge with one another. In Torfs' work the spoken words and the static pictures blend in order to create an imaginary realm beyond cinema. Published alongside exhibitions at K21 Standehaus, Dusseldorf (February - July 2010) and the Generali Foundation, Vienna (September - December 2010). English and German text.

A step-by-step gentle journey beyond secondary school, through the mathematics of neural networks, and making your own using the Python computer language. Neural networks are a key element of deep learning and artificial intelligence, which today is capable of some truly impressive feats. Yet too few really understand how neural networks actually work. This guide will take you on a fun and unhurried journey, starting from very simple ideas, and gradually building up an understanding of how neural networks work. You won't need any mathematics and an accessible introduction to calculus is also included. The ambition of this guide is to make neural networks as accessible as possible to as many readers as possible - there are enough texts for advanced readers already! You'll learn to code in Python and make your own neural network, teaching it to recognise human handwritten numbers, and performing as well as professionally developed networks. Part 1 is about ideas. We introduce the mathematical ideas underlying the neural networks, gently with lots of illustrations and examples. Part 2 is practical. We introduce the popular and easy to learn Python programming language, and gradually builds up a neural network which can learn to recognise human handwritten numbers, easily getting it to perform as well as networks made by professionals. Part 3 extends these ideas further. We push the performance of our neural network to an industry leading 98% using

The Biopolitics of Gender Penguin

The book 'tu Vidy' emerged in search of answers to questions asked by adolescent girls

and women in India during the author's interactions with them as part of Menstrual Health workshops, conducted over a span of a decade across rural India. In an attempt to decode menstrual practices, the author undertook a journey across India and studied various indigenous knowledge systems such as 'a'-Dar'ana, 'yurved, Tantra, Cakra, Y'g, 'gama ''stra, Jyotis'a 'a'stra, and several sub-texts from these

categories. As a result, the book goes beyond just describing cultural practices and takes a deep dive into explaining the scientific and logical reasoning behind the origin of these practices. This book is for all Indian women who have unanswered questions pertaining to menstrual practices, for menstrual researchers who will find a treasure trove of potential areas for research pertaining to menstrual health, for sportswomen to discover the ancient techniques that worked in sync with women's periods and not against it, and also for the feminist who assumes that cultural practices around menstruation are a taboo that needs to be done away with. The correct understanding of the science behind menstrual practices, as given in this book, will help women prevent menstrual difficulties, develop a positive attitude toward menstruation, and learn to work in sync with nature's cycles. ?tu (pronounced as ruthu) is one of the terms for menstruation in Sanskrit. Vidy? means knowledge. ?tu Vidy? is the author's attempt to bring together various indigenous knowledge systems that provide information about the science of menstruation, which is relevant even to this day.
