*Maths, English, science. Pack one* Coordination Group Publication

The activities in this book are designed both to help children to learn and to understand math concepts, and also to prepare them for taking SATS papers at KS2. There is plenty of research evidence to suggest that children are helped in their understanding of math problems if teachers focus on common misconceptions, and if children are given opportunities for discussion and explanation of their own understanding. Children can also feel stigmatized by being made to focus on their own errors. Mike Spooner has developed activities that present already completed work which children then assess, correct and discuss - in this way they can analyze mistakes without damage to their own self-esteem. The activities are presented in the same

format as the SATS papers, to give children practice in coping with that format. The book also contains writing frames that children can use to structure their discussions of math problems.

**2018 Tests** Letts & Lonsdale

Issues in Science Teaching covers a wide range of important issues which will interest teachers at all phases in the education system. The issues discussed include: the nature and purposes of science education in a multicultural society, including the idea of science for all the role and purposes of investigational work in science education assessment, curriculum progression and pupil attitudes to their science experience supporting basic skills development in literacy, numeracy and ICT, through science teaching supporting cross-curricular work through science teaching taking account of individual differences including ability, special needs, learning style and the case for inclusion The articles are strongly based on current research and are intended to stimulate and broaden debate among the readers. Written by practising science educators and teachers, this book offers new and interesting ways of developing science education at all levels.

**KS2 Science SATs Practice Papers - Levels 3-5 2008** Routledge

'The structure [of this book] encourages active participation via reflective activity boxes which further allows for the engagement and consolidation of ideas...Evidence based research is cited resulting in the author suggesting a number of practical activities to encourage progression and continuity in science' - ESCalate Why do pupils' learning and motivation slow down markedly as they move from primary to secondary school? Why is this situation worse in science than in any other curriculum subject? This book combines reports of and reflection on best practice in improving progression and continuity of teaching and learning in science - particularly at that transition stage between primary and secondary school.

Presenting the views of teachers and pupils on progression, learning and application of science, the book suggests practical ways of improving teaching and learning in science. Each chapter includes examples of learning materials with notes on how these might be used or adapted by teachers in their own classroom settings. Science teaching in secondary schools is often based on assumptions that children know or can do very little, so the job in the secondary school becomes one of showing pupils how to start 'doing science properly', as if from scratch. The damage that this false view can do to pupils' learning, motivation and confidence is clear. This book will help teachers to assess children's prior knowledge effectively and build meaningful and enjoyable science lessons.

*Key Stage Two* SAGE

The separate Practice Papers are similar in both appearance and content to the actual Science tests and give children further opportunities to prepare for them. Each page is cross-referenced to the Revision Guide, which children can refer to for help. Full instructions and easy-to-use marking schemes are provided.
