/ semantic applications, to modeling tools, smart manufacturing systems, and data science research – this book offers a broad overview of modern intelligent methods and applications of machine learning, evolutionary computation, Industry 4.0 technologies,

and autonomous agents leading to the Internet of Things and potentially a new technological revolution. Though chiefly intended for IT professionals, it will also help a broad range of users of future emerging technologies adapt to the new smart / intelligent wave. In separate chapters, the book highlights fourteen advances in the rapidly evolving area of intelligent systems. Covering major European projects paving the way to a serious smart / intelligent collaboration, the chapters explore e.g. cyber-security issues, 3D digitization, aerial robots, and SMEs that have introduced cyberphysical production systems. Taken together, they offer unique insights into

contemporary artificial intelligence and its potential for innovation. **Proceedings** Penquin

The peer reviewed papers in this 2 volumes set show the latest developments in the field of Mechatronics and Applied Mechanics. In particular, they cover topics Technology, Material of Manufacturing Technology and Processing, Mechatronics and Automation, Mechatronics and Embedded System Applications and Applied Mechanics and Other topics. Volume is indexed by Thomson Reuters CPCI-S (WoS). The papers are grouped as follows: Chapter 1: Manufacturing Technology and Processes, Design, Modelling, Simulation and Mechanical Engineering; Chapter 2: Robotic, Automation, Sensors, Detection and Monitoring Technologies; Chapter 3: Development Electtonics, Networks, Information

Technology and Algorithms in Systems Applications; Chapter 4: Mechanics, Thermal and Dynamics Systems, Vibration, Noise, Applied Mechanics and Numerical Simulation Applications; Chapter 5: Materials Science and Manufacturing Processes; Chapter 6: Control System Modeling and Applications; Chapter 7: Developments in Medical Technologies and Images Processing Technologies.

This handbook is an important and valuable source for engineers and researchers in the area of internal combustion engines pollution control. It provides an excellent updated review of available knowledge in this field and furnishes essential and useful information on air pollution constituents, mechanisms of formation, control technologies, effects of engine design, effects of operation conditions, and effects of fuel formulation and additives. The text is rich in explanatory diagrams, figures and tables, and includes a considerable number of references. An important resource for engineers and researchers in the area of internal combustion engines and pollution control Presents and excellent updated review of the available knowledge in this area Written by 23 experts Provides over 700 references and more than
