In thermodynamics and physical chemistry, thermochemistry is the study of the heat evolved or absorbed in chemical reactions.

Thermochemistry, generally, is concerned with the heat exchange accompanying transformations, such as mixing, phase transitions and chemical reactions. This book presents leading research from around the world in this important field. Recent developments in the thermochemistry of pre-nucleation clusters are discussed, as well as the atmospheric implications of the new thermochemical data.

Furthermore, plasma surface treatments are widely used in industrial applications. Thus, thermochemical processes assisted by plasma in the manufacturing sector are presented. Also discussed in this book are other advances in the field of chemistry, including the effect of nanostructure on the optical properties of earth ions.

Cilia are microscopic finger-like cell-surface organelles possessed by a great many eukaryotic organisms, including humans, whose purposes include generating local fluid movements via rhythmic whip-like beating and environmental sensing. Despite intense research efforts since their discovery by van Leeuwenhoek in the 1670 ' s, several key questions regarding ciliary functions, experimental manipulation and in silico imitation remain unanswered. Major justifications for cilia research lie in their involvement in various forms of human disease (ciliopathies) and their ability to instantiate decentralised, asynchronous sensorial-actuation of adjacent matter through modulation of beating characteristics. Further elucidation of these characteristics, which is a problem requiring the combined expertise of mathematicians, computer scientists, engineers and life scientists, will lead to novel biomedical therapies, creation of 'smart ' actuating surfaces for

microfluidics/lab-on-chip applications and a greater understanding of fluid mechanics in real-world scenarios. This lavishly-illustrated anthology presents recent advances in the fields of ciliary investigation, manipulation, emulation, mimesis and modelling from key researchers in their fields: its goal is to explain the state-of-the-art in cilia bioengineering and bio-computation in a uniquely creative, accessible manner, towards encouraging further transdisciplinary work in the field as well as educating a broad spectrum of scientists and lay people. The volume is split into three distinct but interwoven themes: Biology: Biological preliminaries for the study of cilia; the state-of-the-art in genetic engineering of ciliated cells for biomedical purposes; reprogramming of cilia dynamics in live cells; Engineering: Creation of macro cilia robots for object sorting applications; pneumatic cilia for the optimization of fluid motion; electrostatic, magnetic and MEMS cilia for microfluidic mixing; reviews in artificial cilia fabrication, actuation and flow induction methods; Numerical and computational modelling. Analyses of thin film cilia for 'lab on chip' microfluidic mixing applications; modelling of gel-based artificial cilia towards simulating dynamic behaviors of responsive cilia layers in complex fluids across a wide range of potential applications.

Identical twin sisters Freya and Shona take very different paths, leading to long-buried family secrets that reverberate through the generations in this thrilling novel of psychological suspense by the author of *Tell Me How It Ends*. There are some choices you can't come back from. It is 1944 in war-ravaged London. Freya and Shona are identical twins, very close despite their different characters. Freya is a newly qualified doctor tending to the injured in a London hospital, while Shona has been recruited by the SOE. The sisters are so physically alike that they can fool people into thinking that one is the other. It's a game they've played since childhood. But when Shona persuades her twin to swap roles to meet her Polish lover, he is angered at being tricked. Then Shona proposes a far more dangerous swapping of roles. At first Freya

refuses but finally she agrees, with consequences so dangerous that they threaten not only the happiness but the lives of both sisters. Forty-five years later in November 1989 Freya, now aged 69, is watching television with her daughter Kirsty. Freya is gripped as she witnesses crowds of Berliners attempting to knock down their hated Wall. This sight stirs long buried memories of her own war and her sister's, and of events in wartime Poland - memories that she has never shared with anyone. Even if she wanted to reveal them now, she couldn't. She's suffering from a brain tumour and is unable to speak although her reason is unimpaired. And this is what she's thinking: if they succeed in knocking down the Wall, what secrets will come tumbling through? If her own were revealed, it would be devastating for all those close to her, especially her daughter.

In recent years there has been a significant growth in interest of the so-called "law in context" extending legal studies beyond black letter law. This book looks at the relationship between statute law and legal practice. It examines how law is applied in reality and more precisely how law is perceived by the general public in contrast to the legal profession. The authors look at a number of themes that are central to examining ways in which myths about law are formed, and how there is inevitably a constitutive power aspect to this myth making. At the same time they explore to what extent law itself creates and sustains myths. The book will be of general interest to a number of different disciplines such as legal theory, general law, criminology and sociology.

Throughout human history, wars and violence have often been waged in the name of religions and in the name of diverging religious beliefs and belonging. Ironically, though, all religions in their teachings speak of nonviolence and have in common the promotion of peace and justice, namely the respect of human life and dignity, the institution of human rights, the protection of the poor and vulnerable, the freeing of the oppressed, the active elimination of injustice? It seems therefore, that violence and wars would be antithetical to religions; yet they are so frequently used as their justification. Are we then speaking of different "religions"? "Institutional religions," the ones structured by humans and that are brandished to lead violence and wars, become in fact quite foreign to the essence of the religions as they were established by their founders and that they intend to represent; they actually contribute to their destruction. Wanting to reflect on that point, I embarked, a few years ago, on giving voice to local religious individuals, whom I called "Religious Peacemakers," and who, each by living the essential teachings of their particular faith, contributed by their actions to peace and justice. I wanted to prove that their path, irrespective of their original religion, would be similar, and that their diverse faith,

instead of separating them, would on the contrary end up uniting them.
