Application of Alternative Fuels Penguin
This book describes the feasibility and status of the use of alternative fuels in marine engineering, as well

as the application of liquefied natural gas, biodiesel and their blends as marine fuels, and the combustion of synthetic coal-based fuels. Each chapter in the book ends with a summary, which gives the reader a quick and clear understanding of the main contents of the chapter. The book gives a lot of advice on the selection of equipment and parameters, fuel reserves and preparation for scholars related to alternative fuels in ships, and points them in the way. It contains lots of illustrations and tables and explains it in the form of chart comparison. The authors have developed mathematical models and methods for calculating the parameters of fuel systems for biodiesel fuels and liquefied natural gas. Recommendations for choosing the rational parameters of these systems are given, as are schematic solutions of the fuel systems, recommendations for

selecting equipment, storing, and preparing the fuels.

Application of the materials described in the book provides the SPP designers with a reliable tool for choosing rational characteristics of the fuel systems operating on alternative fuels and improving the efficiency of their application on ships.

Diesel Engine System Design links everything diesel engineers need to know about engine performance and system design in order for them to master all the essential topics quickly and to solve practical design problems. Based on the author's unique experience in the field, it enables engineers to come up with an appropriate specification at an early stage in the product development cycle. Links everything diesel engineers need to know about engine performance and system design featuring essential topics and techniques to solve practical design problems. Focuses on engine performance and system integration including important approaches for modelling and analysis. Explores fundamental concepts and generic techniques in diesel engine system design incorporating durability, reliability and optimization theories.

From artificial neural net / game theory / semantic applications, to modeling tools, smart manufacturing systems, and data science research – this book offers a broad overview of modern intelligent methods and applications of machine learning, evolutionary computation, Industry 4.0 technologies, and autonomous agents leading to the Internet of Things and potentially a new technological revolution. Though chiefly intended for IT professionals, it will also help a broad range of users of future emerging technologies adapt to the new smart / intelligent wave. In separate chapters, the book highlights fourteen successful examples of recent advances in the rapidly evolving area of intelligent systems. Covering major European projects paving the way to a serious smart / intelligent collaboration, the chapters explore e.g. cyber-security issues, 3D digitization, aerial robots, and SMEs that have introduced cyber-physical production systems. Taken together, they offer unique insights into contemporary artificial intelligence and its potential for innovation.

Tales of a Blue Water Cruiser: 50,000 Miles of South Pacific Sailing By: J R Williams
Tales of a Blue Water Cruiser is a true story of J R Williams, a man from the Pocono Mountains of

Pennsylvania who ended up as a pilot for Hawaiian Airlines and was talked into buying a sailboat by one of his early captains when he was about 30 years old. From there he ventured into the open ocean and eventually taught himself celestial navigation and sailed from Hawaii to Tahiti, the Marquesas, and back to Hawaii. He continued open-ocean sailing over the years, ending with a five-year retirement cruise. This is proof that if you try hard enough you can accomplish anything—even if at first you never considered doing it.
