This book draws together recognized experts from numerous institutions in Western Europe, Eastern Europe, the former Soviet Union, and

North America. Nuclear facility decontamination and decommissioning, waste treatment, management and disposal, long-term monitoring and surveillance, and prevention of proliferation are the primary topics discussed, including critical assessments of the existing knowledge and identification of the needs for future collaboration. Proposals are presented for a variety of national and international agencies, and preliminary business plans developed for collaboration with private companies. A network of international projects needs to be financed since it is such projects that will ultimately ease tensions, help solve nuclear waste contamination and security problems, and help pave the road toward nuclear weapons disarmament.

Through an investigation of the body and its oppression by the church, the medical profession and the state, this book reveals the actual horrors lying beneath fictional horror in settings as diverse as the monastic community, slave plantation, operating theatre, Jewish ghetto and battlefield trench. The book provides original readings of canonical Gothic literary and film texts including *The Castle of Otranto*, *The Monk*, *Frankenstein*, *Dracula* and *Nosferatu*. This collection of fictionalised dangerous bodies is traced back to the effects of the English Reformation, Spanish Inquisition, French

Revolution, Caribbean slavery, Victorian medical malpractice, European anti-Semitism and finally warfare, ranging from the Crimean up to the Vietnam War. The endangered or dangerous body lies at the centre of the clash between victim and persecutor and has generated tales of terror and narratives of horror, which function to either salve, purge or dangerously perpetuate such oppositions. This ground-breaking book will be of interest to academics and students of Gothic studies, gender and film studies and especially to readers interested in the relationship between history and literature.

Peacemakers Throughout human history, wars and violence have often been waged in the name of religions and in the name of diverging religious

beliefs and belonging. Ironically, though, all religions in their teachings speak of nonviolence and have in common the promotion of peace and justice, namely the respect of human life and dignity, the institution of human rights, the protection of the poor and vulnerable, the freeing of the oppressed, the active elimination of injustice? It seems therefore, that violence and wars would be antithetical to religions; yet they are so frequently used as their justification. Are we then speaking of different "religions"? "Institutional religions," the ones structured by humans and that are brandished to lead violence and wars, become in fact quite foreign to the essence of the religions as they were established by their founders and that they intend to represent; they actually contribute to their destruction. Wanting to reflect on that point, I embarked, a few years ago, on giving voice to local religious individuals, whom I called

"Religious Peacemakers," and who, each by living the essential teachings of their particular faith, contributed by their actions to peace and justice. I wanted to prove that their path, irrespective of their original religion, would be similar, and that their diverse faith, instead of separating them, would on the contrary end up uniting them.

Sixty years ago at the Waite Agricultural Research Institute, G. Samuel, a plant pathologist, and C. S. Piper, a chemist, published their conclusion that the cause of roadside take-all, a disease of oats, was manganese deficiency. This report, together with the concurrent and independent studies of W. M. Carne in Western Australia were the first records of manganese deficiency in Australia and came only six years after McHargue's paper which is generally accepted as the final proof of the essentiality of this element. There must have been a few doubts for some people at the time, however, as the CAB publication, 'The Minor Elements of the Soil' (1940) expressed the view that further evidence to this effect was provided by Samuel and Piper. Their historic contributions are recognised by the International Symposium

on Manganese in Soils and Plants as it meets on the site of their early labours to celebrate the 60th anniversary. This year Australians also acknowledge 200 years of European settlement in this country and so the Symposium is both a Bicentennial and a diamond jubilee event which recognises the impact of trace elements on agricultural development in Australia. In a broader sense, a symposium such as this celebrates, as it reviews, the efforts of all who over the ages have contributed to our knowledge of manganese in soils and plants.

With growing popularity of homeopathy world-wide, it has gained an official status.

Homeopathic Pharmacy has never been a static subject, it kept growing, and today, we find immense amount of work available on subject.

There is a need for standardisation as there are

many up-and-coming pharmacopoeias of various countries, including India. Thus, there is a need for making 'Homeopathic Pharmacy' a more comprehensible subject. While making this book, an effort has been made to maintain the originality of subject while incorporating new technologies. This book is of use to both undergraduates and to those pursuing post-graduation, in the subject.
