Practical Process Control introduces process control to engineers and technicians unfamiliar with control techniques, providing an understanding of how to actually apply control in a

real industrial environment. It avoids analytical treatment of the numerous statistical process control techniques to concentrate on the practical problems involved. A practical approach is taken, making it relevant in virtually all manufacturing and process industries. There is currently no information readily available to practising engineers or students that discusses the real problems and such material is long overdue. An indispensable guide for all those involved in process control Includes equipment specification, troubleshooting, system specification and design Provided with guidelines of HOW TO and HOW NOT TO install process control

COMPILATION OF THE

WORST JOB APPLICATIONS

IMAGINABLE - A PERFECT

STOCKING FILLER OR

OFFICE SECRET SANTA

GIFT THIS CHRISTMAS. Ever read a truly terrible job

application? Or perhaps slightly exaggerated the truth on one of your own... We've all been there - but these are worse. So much worse. From overly-honest cover letters, embarrassing typos, and mortifying personal revelations, to awkward interview questions, misplaced self-confidence, and, of course, outright lies. This hilarious collection of shockingly dreadful job applications, crap CVs and excruciating interviews will have you laughing out loud, while also making you feel so much better about yourself - because at least you weren't ever this bad . . . Application for Employment I refer to the recent death of the Technical Manager at your company and hereby

apply for the replacement of the deceased manager. Each time I apply for a job, I get a reply that there is no vacancy but in this case I have caught you red-handed and you have no excuse because I even attended the funeral to be sure that he was truly dead and buried before applying. Attached to my letter is a copy of my CV and his death certificate. The Interview: Q. Is there anything about this job that you feel you might not be very good at? A. Dealing with people. Q. What person, living or dead, would you most like to meet? A. The living one.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best

performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron

constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

If you have ever looked at a fantastic adventure or science fiction movie, or an amazingly complex and rich computer

game, or a TV commercial where cars or gas pumps or biscuits behaved liked people and wondered, "How do they do that?", then you've experienced the magic of 3D worlds generated by a computer. 3D in computers began as a way to represent automotive designs and illustrate the construction of molecules. 3D graphics use evolved to visualizations of simulated data and artistic representations of imaginary worlds. In order to overcome the processing limitations of the computer, graphics had to exploit the characteristics of the eye and brain, and develop visual tricks to simulate realism. The goal is to create graphics images that will overcome the visual cues that cause disbelief and tell the viewer this is not real. Thousands of people over thousands of years have developed the building blocks and made the discoveries in mathematics and science to make such 3D magic possible, and The History of Visual Magic in Computers is dedicated to all of them and tells a little of their story. It traces the earliest understanding of 3D and then foundational mathematics to explain and construct

3D; from mechanical computers up to today's tablets. Several of the amazing computer graphics algorithms and tricks came of periods where eruptions of new ideas and techniques seem to occur all at once. Applications emerged as the fundamentals of how to draw lines and create realistic images were better understood, leading to hardware 3D controllers that drive the display all the way to stereovision and virtual reality.

Throughout human history, wars and violence have often been waged in the name of religions and in the name of diverging religious beliefs and belonging. Ironically, though, all religions in their teachings speak of nonviolence and have in common the promotion of peace

and justice, namely violence and wars, the respect of human life and dignity, the institution of human rights, the protection of the poor and vulnerable, the freeing of the oppressed, the active elimination of injustice? It seems therefore, that violence and wars would be antithetical to religions; yet they are so frequently used as their justification. Are we then speaking of different "religions"? "Institutional religions," the ones structured by humans and that are brandished to lead and become in fact quite foreign to the essence of the religions as they were established by their founders and that they intend to represent; they actually contribute to their destruction. Wanting to reflect on that point, I embarked, a few years ago, on giving voice to local religious individuals, whom I called "Religious Peacemakers," and who, each by living the essential teachings of their particular faith, contributed by their actions to peace and justice. I wanted to prove

that their path, irrespective of their original religion, would be similar, and that their diverse faith, instead of separating them, would on the contrary end up uniting them.

From an author way worse than JK Rowling comes: One Crazy Adventure - a comedic telling of a gap year spent in America by two guys with no plan (and quite frankly, no idea.) Straight out of high school, two best mates from Australia land in NYC with no money, no car, no contacts... no nothing! Somehow, one crazy, hilarious year later and they'd finished an impressive 35 Spartan Races in 34 states and 14

countries. Highlights include (but are not limited to) Tim scares a seal, Josh (maybe) gets eaten by a bear in Canada, Josh (definitely) head-butts a shark in Belize, they both surf a volcano in Costa Rica, ride mules into the Grand Canyon, and Tim falls three stories to possible death (will he live? You'll have to get the book to find out!). Ohh, and he was also held at gunpoint and shot in the back, too. Now I think about it, you could say this book is a thriller! *no-one was hurt in the making of this book (sorry for the spoiler)
