Preclinical Manual of Conservative Dentistry - E-Book JP Medical Ltd  
This book describes the challenges that deep carious lesions pose for dental practitioners, including the risk of endodontic complications and the difficulty of restorative treatment, and identifies options for overcoming these challenges on the basis of the best available evidence. The opening chapter sets the scene by discussing pathophysiology, histopathology, clinical symptomatology, and treatment thresholds. The various treatment options are then systematically presented and reviewed, covering non-selective, stepwise, and selective carious tissue removal and restoration, sealing of lesions using resin sealants or crowns, and non-restorative management approaches. In each case the current evidence with respect to the treatment is carefully evaluated. Advantages and disadvantages are explained and recommendations made on when to use the treatment in question. Illustrative clinical cases and treatment pathways for clinicians are included. This book will be of value for all practitioners who treat dental caries and carious lesions, whether in the permanent or the primary dentition. It will also be of interest to under- and postgraduate students in cariology and restorative, operative, preventive, and pediatric dentistry.

Throughout the world, teacher education is once more in the spotlight. This book focuses on recent trends and experiences in England and Wales, where external pressures have caused tension between the technician model of teacher education, in which teachers learn primarily on the job alongside colleagues, and traditional forms of teacher education based in higher education institutions. This tension superficially replicates an old dichotomy between practice and theory. The contributors to this volume reflect on ideas and attempts to integrate theory and practice. Key questions and themes recur: the balance and relationship between work done in school on the job and work away from the workplace, such as in universities; teacher education as a partnership activity; and the need to critically examine the institutional, cultural, and historical context in which they work.
