In working with integers, students have difficulties that may extend into middle school and even adulthood.

However, even young children can display insights into negative numbers well before receiving formal instruction. Using a pre-test, instruction, post-

---

test design, this study explores how first graders reason about negative number properties and operations and how their understanding changes depending on the instruction they receive. Results of the study indicate that children build on their existing whole number understanding to develop a central conceptual structure for integers. Furthermore, the process by which they extend their numerical central conceptual structure differs among students; their initial schemas, together with the form of the integer instruction, influence how they reason about and solve integer addition and subtraction problems. These results highlight the need to revisit the placement, duration, and content of integer instruction in curricula.

Children in the Information Age: Opportunities for Creativity, Innovation and New Activities contains selected papers from the Second International Conference and Exhibition "Children in the Information Age: Opportunities for Creativity, Innovation and New Activities," held in Sofia, Bulgaria,

19-23 May 1987. The contributions made by researchers at the conference covered topics such as the past, present, and future of school informatics in the USSR; the family computer boom and its implications for computer literacy; the new meanings of literacy related to new information and communication technologies; computer use in education; and literacy in the information age. Other papers dealt with computer-based training in India; knowledge based systems for use in

---

pedagogical contexts; informatics competitions in Germany; the information age; information and communication technology in the French educational system; and the role of information technology in education in Australia. The final two chapters present the recommendations that emerged from the conference as well as the recommendations of the Working Meeting of Editors of Journals and Magazines on Informatics in Education.

The teaching and learning of mathematics in Saskatchewan—one of three Canadian provinces sharing a border with Montana—has a long and storied history. An integral part of the past 50 years (1961-2011) of history has been *vinculum: Journal of the Saskatchewan Mathematics Teachers' Society* (in its many different renditions). This monograph, which presents ten memorable articles from each of the

---

past five decades (i.e., 50 articles from the past 50 years of the journal), provides an opportunity to share this rich history with a wide range of individuals interested in the teaching and learning of mathematics and mathematics education. Each decade begins with an introduction, providing a historical context, and concludes with a decade-specific commentary by a prominent member of the Saskatchewan mathematics education community. As a result, this monograph provides a historical account as well as a contemporary view of many of the trends and issues (e.g., curriculum, technology) in the teaching and learning of mathematics. This book is meant to serve as a resource for a variety of individuals, including teachers of mathematics, mathematics teacher educators, mathematics education researchers, historians, and undergraduate and graduate students and, further, as a celebratory

The Japanese language is often under attack by linguists, translators and even amateurs for having a seemingly vague set of rules, making it near impossible to ever fully grasp all of the language's facets. Roy Andrew Miller guides the reader through these often contradictory allegations by evaluating Japanese in the light of linguistic science. He also pays particular attention

to the problems inherent in certain systems for describing the language, and to questions posed by published translations from Japanese literature. *Writing, Grade 3 Grade 1 Reading Skill Builders* are great tools for keeping children current during the school year or preparing them for the next grade level.
