POLICE: Brotherhood in Uniform Around the World is a photography book showcasing police officers encountered during Matt Javit's 800-day journey around the world. 89 large-format color photographs from 60+ cities celebrate police who, while performing daily duties, paused to show off their uniforms

proudly.
Thomas Register of American Manufacturers diplom.de Scientific Evidence in Civil and Criminal Cases provides those participating in trials with a concise understanding of the scope of commonly encountered types of expert testimony and the nature of results which my be expected from specialists. It explores both the potentialities and limitations of expert proof. It discusses the qualifications needed for expert witnesses from various disciplines and explains the status of the law

concerning the types of evidence encountered in a trial. One volume.

Transportation Research Record DIANE Publishing

The Virginia Department of Transportation (VDOT) has made significant investments in the traffic-monitoring infrastructure that supports intelligent transportation systems (ITS). The purpose of this infrastructure is to provide accurate, real-time information on the status of the transportation system; thus it is critical that the monitoring infrastructure provide accurate data. Although detectors are usually tested immediately after installation, it is well known that they operate in a very harsh environment and thus are susceptible to

degradation in accuracy and/or complete failure. Consequently, a long-term commitment to data quality assurance is required through maintenance, data quality assessment testing, and repair/replacement. The quality of data from ITS applications is becoming increasingly important as the data are more widely used. Not only is the data used in real-time operations, but also in myriad other, often more traditional, transportation applications. The purpose of this research project was to develop a procedure that VDOT could use to assess its ITS data quality. The report includes a data quality assessment procedure that is based on theory, practice, and empirical investigation. The procedure has the following key features: benchmark data collection using temporary installation of non-intrusive detectors; data quality assessed at the lane level to pinpoint problem detectors; data quality assessed at the 1-minute interval (or minimum practical measurement interval) level to provide sufficient quantities of data in reasonable periods of time; analysis techniques including both measures and plots, which provide quantitative and visual indications of data quality. The authors

recommend that VDOT begin to use the procedure on both an ad-hoc basis and in a statewide program as a means of protecting its significant investment in ITS data collection.

Car and Driver John Wiley & Sons
"By linking building theory to the emancipatory project of critique advanced by radical thinkers in our time, this work investigates the key conceptual and historical elements that culminate in an emancipatory theory of building entitled: 'Toward A Philosophy of Shelter'. Taking Marx as its only resource, this work proceeds with the conviction that our era is contemporaneous to Marx's historical era. This means 'not judging the validity of Marx from the perspective of the historical situation', but rather, 'demonstrating the validity of a Marxian perspective for a singular historical situation', as ours. This work will therefore translate this perspective into seeing the situation of architecture through the eyes of Marx. All those concerned with the predicament in our current condition in which architecture must play a major social role in upholding the universal value of what Alain Badiou

calls 'generic humanity' will take an interest in this work. In particular, architects, critics, scholars and students inside the field of architecture who would be seeking the application of this universal value to a new theory of building will be a welcoming audience for this work"--

Aggressive Driving Enforcement

A research report to identify or develop a speed monitoring display suitable for use in interstate highway work zones, & evaluate the display's effectiveness in reducing speeds in interstate work zones. A review of the literature & current practice was conducted to identify product availability & other state transportation use. Speed monitoring display alternatives were identified & evaluated according to essential requirements & project evaluation criteria. A lidar laser radar device was tested with a changeable message sign.

The speed monitoring display was effective in reducing speeds higher than 70 mph.

Inhaltsangabe: Abstract: Small and medium-sized enterprises (SMEs) are the backbone of the German economy. Against the background of continuing globalisation, they are increasingly faced with the challenge of internationalisation. This study was designed as an empirical investigation of how well SMEs in the federal state of Saxony are prepared for this task of the future, which measures they take in order to market their products and services in the global marketplace, and it tries to identify their strengths and weaknesses in this respect. The very nature of this thesis is thus a truly interdisciplinary approach, investigating marketing aspects as well as linguistic factors. The main focus was on the language small and medium-sized companies use for their international communications. English has long become the lingua franca of the globalising economy, and this study set out to investigate how well SMEs are prepared to meet the linguistic requirements imposed on them by global business. Enterprises in the new German states are widely believed to be

disadvantaged with regard to their communicative competence in English, since English played only a minor role for decades, but has risen to decisive significance within the past couple of years, taking many companies and their employees by surprise, finding them not as well prepared as their colleagues in the old German states. Still, finding their way to the new export markets in Western Europe, the Americas and Asia are vital for the survival of Saxon economy, and communicative competence in English as the lingua franca of international business is the major prerequisite for achieving this objective. Corporate communicative competence involves various aspects, including the foreign language skills of the employees covering the entire range of linguistic skills from oral communication including listening and speaking, giving presentations or participating in negotiations to writing skills ranging from reading and writing of various text types, including media literacy. Apart from the personal linguistic competence of the employees, the corporate linguistic competence of the company also plays a major role for the perception of the company on its international markets. Therefore this study focused on investigating how well SMEs present themselves in their corporate literature and on the internet, which instruments from

the wide-ranging selection of marketing tools they apply for communicating [...] Florida Administrative Weekly In-depth coverage of instrumentation and measurement from the Wiley Encyclopedia of Electrical and Electronics Engineering The Wiley Survey of Instrumentation and Measurement features 97 articles selected from the Wiley Encyclopedia of Electrical and Electronics Engineering, the one truly indispensable reference for electrical engineers. Together, these articles provide authoritative coverage of the important topic of instrumentation and measurement. This collection also, for the first time, makes this information available to those who do not have access to the full 24-volume encyclopedia. The entire encyclopedia is available online-visit www.interscience.wiley.com/EEEE for more details. Articles are grouped under sections devoted to the major topics in instrumentation and measurement, including: * Sensors and transducers * Signal conditioning * General-purpose instrumentation and measurement * Electrical variables * Electromagnetic variables * Mechanical variables * Time,

frequency, and phase * Noise and distortion Language and Business
* Power and energy * Instrumentation for
chemistry and physics * Interferometers and Index of Patents Issued from the United States
spectrometers * Microscopy * Data Patent and Trademark Office
acquisition and recording * Testing
methods The articles collected here provide
broad coverage of this important subject
and make the Wiley Survey of
Instrumentation and Measurement a vital
resource for researchers and practitioners
alike
