Fetal Development: Structures and Milestones

Lab Development Of Human Fetus

Fetal development week by week |

BabyCenter

After about 12 weeks of development the embryo is considered a fetus. At this point it has the characteristics which establish it as unquestionably human. The fetus is less susceptible to teratogens; however, these noxious agents may interrupt the normal functional development of organs, especially the central nervous system throughout pregnancy.

Fetal Development | Anatomy and Physiology II

Describe the process of human development from fertilization to birth and major changes that occur in each trimester of pregnancy.

(moderate) Procedure: 1. Examine the figure

below. It shows six stages of a developing fetus.

The stages are shown at 40% of the fetus ' s actual size. 2. Study the lengths indicated on the diagram of the 38-week fetus.

Explore Biology*

In human pregnancies, a baby-to-be isn't considered a fetus until the 9th week after conception, or week 11 after your last menstrual period (LMP). The embryonic period is all about the formation of important systems of the body. Think of it as your baby's basic foundation and framework.

10 HIV Transmission - Sam Houston State University

At 8 weeks of pregnancy, the placenta and fetus have been developing for 6 weeks. The placenta forms tiny hairlike projections (villi) that extend into the wall of the uterus. Blood vessels from the embryo, which pass through the umbilical cord to the placenta, develop in the villi.

The chorionic villi have a
central core and fetal
capillaries, and a double
layer of trophoblast cells.
The syncytial layer or the
outer portion of the two
layers produces placental
hormones such as hPL, hCG,
estrogen, and progesterone.
The Langhans' layer is the
middle layer and it protects
the embryo and fetus from
infectious diseases. This
layer appears to function as
early as 12 days' gestation.

Fetal Development Stages:

Month by Month Embryo Pictures

Trace the development of a fetus from the end of the embryonic period to birth As you will recall, a developing human is called a fetus from the ninth week of gestation until birth. This 30-week period of development is marked by continued cell growth and differentiation, which fully develop the structures and functions of the immature organ systems formed during the embryonic period.

Human Fetal Growth Lab - Gulf Coast State College

"There are several atlases available showing prenatal human development. However, none is focused on prenatal orofacial development during maxillary and mandibular bone formation. These events, together with dental development and formation of the temporomandibular joint, take place during several fetal stages.
