fetus appear. •The excretory system develops rapidly. 4 months 15 cm •The fetus kicks its legs and moves its arms. • The skin develops. 5 months 25 cm •The rate of growth slows. • Fine hair develops. • The parent(s) and doctor can listen to the fetal heart rate with a stethoscope. •The fetus can suck its thumb.

Fetal development week by week | BabyCenter

The chorionic villi have a central core and fetal capillaries, and a double layer of trophoblast cells. The syncytial layer or the outer portion of the two layers produces placental hormones such as hPL, hCG, estrogen, and progesterone. The Langhans' layer is the middle layer and it protects the embryo and fetus from infectious diseases. This layer appears to function as early as 12 days' gestation.
