"Lab Manual for Biomedical Engineering: Devices and Systems" examines key concepts in biomedical systems and signals in a laboratory setting. Designed for lab courses that accompany lecture classes using "Systems and Signals for Bioengineers" by J. Semmlow, the book gives students the opportunity to complete both measurement and math modeling exercises, thus demonstrating that the experimental real world setting directly corresponds with classroom theory. In completing the lab work, students enhance their understanding of the lecture course. They connect theory to real data, which helps them master the scientific method. All the experiments in the lab manual have been extensively class-tested over several years. Sample measurements are provided for each experiment, ensuring that students are seeing correct results. All exercises include a set of lab report questions tied to the concept taught in the corresponding lecture course. Each experiment builds on knowledge acquired in previous experiments, allowing the level of difficulty to increase at an appropriate pace. Concepts covered in the manual include: Wave MathFourier TransformationNoise VariabilityTime Signals and FrequencySystems Modeling "Lab Manual for Biomedical Engineering: Devices and Systems" effectively supports the recommended required text, and has been shown to improve student comprehension and retention. The manual can be used in undergraduate courses for biomedical engineering students who have completed introductory Electrical and Mechanical Physics courses. A two-semester background in Calculus is also recommended. Gary M. Drzewiecki earned both his M.S. in Electrical Engineering and his Ph.D. in Bioengineering at the University of Pennsylvania. He is a Professor of Biomedical Engineering at Rutgers University. Dr. Drzewiecki is a senior member of the IEEE Society, and in 2000 received their millennium medal. He is a former advisor to the Noninvasive Cardiovascular Dynamics Society, and he co-chaired the Society's 5th World Congress. With over 100 publications to his credit, Dr. Drzewiecki has written extensively on issues related to noninvasive blood pressure measurement and the mathematical modeling of the cardiovascular system. He is co-editor of the book "Analysis and Assessment of Cardiovascular Function."
