Pluteaceae.
Psathyrellaceae.
Russulaceae.
Strophariaceae.
Tricholomataceae.
Ascomycetes. For ease of use we have grouped all jelly fungi (heterobasidiomycetes) together. Similarly all bracket and crust fungi are also grouped, as also are the various puffballs, earthballs, earthstars and stiltballs that, together with stinkhorns, are by tradition called gasteromycetes (even though there is no scientific justification for

their being categorised together other than the fact that they all ...

Identifying Edible and

Poisonous Wild Mushrooms

There are roughly 15,000

types of wild fungi in the UK.

Our guide aims to help you

identify the best to eat and the

most important ones not to

pick. Never rely on one

source for mushroom

identification, and never eat

anything unless you are 100%

sure it is edible.
