Capital Volume I is essential reading on many undergraduate courses, but the structure and style of the book can be confusing for students, leading them to abandon the text. This book is a clear guide to reading Marx's classic text, which explains the reasoning behind the book's structure and provides help with the more technical aspects that non-

economists may find taxing. Students are urged to think for themselves and engage with Marx's powerful methods of argument and explanation. Shapiro shows that Capital is key to understanding critical theory and cultural production. This highly focused book will prove invaluable to students of politics, cultural studies and literary theory.

Questions about the  
causes or sources of  
work stress have been  
the subject of  
considerable research,  
as well as public  
fascination, for  
several decades.  
Earlier interest in  
this issue focused on  
the question of  
whether some jobs are  
simply more inherently  
stressful than others.  
Other questions that  
soon emerged asked  
whether some  
individuals were more  
prone to stress than  
others. The Handbook

of Work Stress focuses primarily on identifying the different sources of work stress across different contexts and individuals.

*Studies in Public Welfare*

After describing the functions of the PC and the role of computers in local and global networks, the authors explain the fundamentals of data management, as well as the support of firms' functions and processes through information processing. The concepts utilized are deployed in a multitude of modern and integrated application systems in manufacturing and service industries. These application examples make up the core of the book. Many application examples

illustrate the methodologies addressed.

"A very clear and engaging introduction to a contemporary analysis of 'race' and racism(s). This text effectively combines key theoretical perspectives with vivid contemporary examples." - Dr Rebecca Barnes, University of Derby  
"Fantastic book for helping students get past the stuntedness of the term 'racism' to understand the way in which racisms are part of our social practices and institutions. -

thoughtful manner.  
Studying and  
teaching racism is

We hear much about  
'race' and 'racism'  
in public discourse  
but the terms are  
frequently used  
without clear  
definitions or  
practical examples  
of how these  
phenomena work.

Introduction  
introduces  
practical methods

which enable  
students to think  
coherently and  
sociologically  
about this complex  
feature of the  
global landscape.  
Steve Garner argues  
that there is no  
single monolithic  
object of analysis  
but rather a plural  
set of ideas and  
practices that  
result in the  
introduction of  
'race' into social  
relations. This  
differs over time  
and from one place  
to another.  
Focussing on the  
basics, this book:  
Defines 'race',  
'racism',  
'institutional  
racism' and  
'racialization'.

---

Provides examples of how these function in fields like the natural sciences and asylum. Clearly sets out theoretical arguments around collective identities ('race', class, gender, nation, religion). Uses empirical case studies, including some drawn from the author's own fieldwork. Points students toward sources of further web and text based information. Engaging and accessible this book provides a signposted route into key elements of contemporary

debates. It is an ideal introduction for undergraduates studying 'race' and ethnicity, social divisions and stratification. Edited by Arthur S.
