The Working Kelpie Untreed Reads Publishing Stolen jewels, secret identities, and death abound in this sparkling tale of suspense set in Victorian England, from New York Times bestselling author Tasha Alexander. London's social season is in full swing, and Victorian aristocracy can't stop whispering about a certain gentleman who claims to be the direct descendant of Louis XVI and Marie Antoinette. But he's not the only topic of wagging tongues. Drawing rooms, boudoirs, and ballrooms are abuzz with the latest news of an audacious cat burglar who has been systematically stealing valuable items that once belonged to the ill-fated queen. Light gossip turns serious when the owner of one of the pilfered treasures is found murdered, and the mysterious thief develops a twisted obsession with Lady Emily Ashton. It will take all of Lady Emily's wit and perseverance to unmask her stalker and ferret out the murderer, while faced with a brewing scandal that threatens both her reputation and her romance with her late husband's best friend, the dashing Colin Hargreaves.

Application for Employment I refer to the recent death of the Technical Manager at your company and hereby apply for the replacement of the deceased manager. Each time I apply for a job, I get a reply that there is no vacancy but in this case I have caught you red-handed and you have no excuse because I even attended the funeral to be sure that he was truly dead and buried before applying. Attached to my letter is a copy of my CV and his death certificate. Crap CVs is a hilarious compilation of the worst job applications imaginable, including overly-honest cover letters, embarrassing typos, mortifying personal revelations, awkward interview questions, misplaced self-confidence, self-aggrandizing gibberish, blatant truth-twisting and, of course, outright lies.

Nutrients as Ergogenic Aids for Sports and Exercise discusses the growing body of information regarding the enhancement of human physical performance by dietary manipulations through ergogenesis. It balances the application of nutritional manipulations between overzealous promoters and recalcitrant cynics. By offering a thorough, comprehensive and up-to-date review of what is known about ergogenic effects of nutrients on humans, it bridges the gap between common usage and scientific knowledge. Nutrients as Ergogenic Aids for Sports and Exercise covers in detail many popular product ingredients not considered elsewhere. It illustrates areas awaiting future research, and offers suggestions for avoiding the pitfalls of performing ergogenesis research.

Zika virus (ZIKV) is a mosquito-borne member of the Flaviviridae family that historically has been associated with mild febrile illness. However, the recent outbreaks in Brazil in 2015 and its rapid spread throughout South and Central America and the Caribbean, together with its association with severe neurological disorders—including fetal microcephaly and Guillain-Barr é syndrome in adults—have changed the historic perspective of ZIKV. Currently, ZIKV is considered an important public health concern that has the potential to affect millions of people worldwide. The significance of ZIKV in human health and the lack of approved vaccines and/or antiviral drugs to combat ZIKV infection have triggered a global effort to develop effective countermeasures to prevent and/or treat ZIKV infection. In this Special Issue of Viruses, we have assembled a collection of 32 research and review articles that cover the more recent advances on ZIKV molecular biology, replication and transmission, virus – host interactions, pathogenesis, epidemiology, vaccine development, antivirals, and viral diagnosis.

Proper design of printed circuit boards can make the difference between a product passing emissions requirements during the first cycle or not. Traditional EMC design practices have been simply rule-based, that is, a list of rules-of-thumb are presented to the board designers to implement. When a particular rule-of-thumb is difficult to implement, it is often ignored. After the product is built, it will often fail emission requirements and various time consuming and costly add-ons are then required. Proper EMC design does not require advanced degrees from universities, nor does it require strenuous mathematics. It does require a basic understanding of the underlying principles of the potential causes of EMC emissions. With this basic understanding, circuit board designers can make trade-off decisions during the design phase to ensure optimum EMC design. Consideration of these potential sources will allow the design to pass the emissions requirements the first time in the test laboratory. A number of other books have been published on EMC. Most are general books on EMC and do not focus on printed circuit board is intended to help EMC engineers and design design. This book engineers understand the potential sources of emissions and how to reduce, control, or eliminate these sources. This book is intended to be a 'hands-on' book, that is, designers should be able to apply the concepts in this book directly to their designs in the real-world.
